

**News release from
Vestas-American Wind Technology**

Portland, 21 February 2018

Vestas secures 50 MW order in the U.S. and continues 4 MW platform production ramp-up in Colorado

Vestas has received an order for 50 MW of V136-3.45 MW turbines delivered in 3.6 MW Power Optimised Mode. The order adds to the more than 900 MW of announced V136-3.45 MW orders in the U.S., since receiving the first order in October 2017. The turbines will all be manufactured at Vestas' four Colorado factories that were upgraded in 2017 to include production lines for the V136-3.45 MW.

"This order once again emphasises the 4 MW platform's momentum in the traditionally 2 MW-dominated U.S. market and how Vestas' ongoing introduction of the newest wind technology to this market and dedication to local manufacturing enable new wind projects and support local communities", said Chris Brown, President of Vestas' sales and service division in the United States and Canada, and continued *"These turbines, and the wind project they power, will generate hundreds of millions of dollars in economic benefits for the community, and support growth in a thriving American manufacturing supply chain"*.

With the vast majority of major wind turbine components domestically sourced, wind turbine manufacturing is a significant driver of growth for American manufacturing. In 2017, Vestas spent more than 1.4 billion dollars across its U.S. based supply chain – with U.S. based companies – to support the production, transport, and operation of wind turbines.

Delivery of the turbines is expected to begin in the third quarter of 2018, with commissioning planned for the fourth quarter.

The order includes supply and commissioning of the wind turbines as well as a multi-year Active Output Management 5000 (AOM 5000) service agreement, Vestas' full-scope service package maximising uptime and energy production.

The project and customer are undisclosed at the customer's request.

About Vestas

Vestas is the energy industry's global partner on sustainable energy solutions. We design, manufacture, install, and service wind turbines across the globe, and with 90 GW of wind turbines in 77 countries, we have installed more wind power than anyone else. Through our industry-leading smart data capabilities and unparalleled 76 GW of wind turbines under service, we use data to interpret, forecast, and exploit wind resources and deliver best-in-class wind power solutions. Together with our customers, Vestas' more than 23,300 employees are bringing the world sustainable energy solutions to power a bright future.
