INZYON

ENTERPRISE INSIGHT SOLUTIONS Inzyon announces upgrade of its ESG monitor

Inzyon upgrades its on-line ESG (Environment, Social and Governance) monitor to include the Inzyon Sustainability Classification Framework (SCF), new pre-configured functionality for internal logging and reporting of ESG analysis, management, actions and compliance as well as optional dashboards for company filings analysis and internal ESG social functions and collaboration. This new version is a tool directly supporting the fulfillment of the six Priciples for Responsible Investment (PRI).

Key benefits

The INZYON ESG monitor aims to put financial decisions makers and analysts ahead of the curve when addressing sustainable finance in general, and ESG risks and opportunities of a portfolio in particular. With the newly added analysis, logging and reporting features the Inzyon ESG monitor streamlines the work of ESG researchers and Fund Managers even further.

New and upgraded, use case based, functionality

With tools dedicated for logging both assets under scrutinizing and your own organisation's ESG related actions, as well as standardized reporting on ESG tactics and compliance, the updated ESG monitor enables significantly more transparent ESG-related communication, both inhouse and with interested external parties. The focus on both asset monitoring and work process support also makes it a key tool for any investment company seeking to comply with the six Priciples for Responsible Investment (PRI). Furthermore, the addition of a company filings dashboard complements that of the regulations monitor dashboard in order to make the ESG monitor a one-stop-shop for news on regulatory changes and filings from portfolio holdings. Our customers

Inzyon's ESG monitor is directly targeted at Asset Management organizations and other financial institutions that will be subject to forthcoming regulations on compliance regarding sustainable investments. Contrary to solutions that provide users with pre-calculated ratings on portfolios or specific holdings, Inzyon's ESG monitor supports the Fund Manager, and/or the ESG researcher to develop their own assessment model. Based on near real time news, narrative data and other unstructured information, Inzyon's ESG monitor enables competitive advantages vs other Asset Management companies as insights on holdings' ESG plans and performance can be spotted at the earliest possible occasion.

Technical aspects

Inzyon ESG Monitor is a for purpose configured, automated, SaaS-application for monitoring, analysing and acting upon ESG related matters in an Asset Management organization's investment universe. Although customers' off the shelf starting configuration only differs with regards to their own investment universe, each customer can then configure algorithms and sources to increase their own competitive advantage in the ESG analysis.

"With the ESG Monitor we aim at supporting, and increasing, the dialogue between the investment community and the management of investment objects, i.e. listed companies, with regards to sustainable investments. We are proud to provide a tool for the financial market that will contribute to a gradually increased fulfilment of the UN's 17 Sustainable Development Goals", says Gabriel Anderbjörk, CEO of Inzyon.

The ESG monitor uses applicable parts of Inzyon's Sustainability Classification Framework (https://scf.inzyon.com).
