

Jurassic World Aftermath – now available

The British development studio Coatsink Software Ltd, which was acquired by Thunderful Group this autumn, has announced that one of their in-house projects, **Jurassic World Aftermath**, now is available.

Jurassic World Aftermath is a riveting new entry in the Jurassic World franchise set between the events of Jurassic World and Jurassic World: Fallen Kingdom.

You play as Sam, a security expert and professional smuggler who crash lands on Isla Nublar. Your mission to recover valuable information goes disastrously wrong when you find yourself trapped in an abandoned research facility. Your only hope of escape is to recover the confidential research for your employers on the mainland as quickly as possible, all while being hunted by deadly Velociraptors unwittingly set loose during the island's evacuation. To survive in this adventure, you'll need to explore the research facility, solve puzzles, and find ways to distract and hide from the ferocious Velociraptors, Dilophosaurus and Pteranodons that stalk your every move.

Aiding you from a nearby ranger tower is Dr. Mia Everett (voiced by Laura Bailey, *The Last of Us: Part II*), a park geneticist whose past is revealed by environmental clues, audio logs, and her own admissions. You'll hear recorded conversations between Dr. Everett and Dr. Ian

Malcolm (voiced by Jeff Goldblum), and your link to the outside world: Dr. Henry Wu (voiced by BD Wong), Dr. Everett's mentor.
