Product Delivery Agreement signed with ISS

LED VirusKill A/S, a spin-off company owned 45% by LED iBond International A/S (LED iBond), has entered into a global agreement with ISS World Services A/S, a leading global workplace experience and facility management company. The agreement follows thorough testing and product development input from ISS. According to the agreement, ISS will include *puriZAP* in its internal catalogue of tools and products available to purchase for ISS facility management operators around the world.

The agreement includes no obligations for ISS to purchase. As such, it is too early to assess the specific financial implications, if any, and hence the announcement does not change the financial outlook for LED iBond.

puriZAP is a unique and cutting-edge UV-C LED handheld disinfection device manufactured by LED iBond. It was introduced on the market in 2020 as an efficient, sustainable and flexible tool for disinfection of objects and surfaces, for instance in the office, retail, hospitality and healthcare sectors. Marketed by LED VirusKill, the *puriZAP* device is based on LED iBond's patented technology platform.

About ISS

ISS is a leading workplace experience and facility management company. In partnership with customers, ISS drives the engagement and well-being of people, minimises the impact on the environment, and protects and maintains property. ISS brings all of this to life through a unique combination of data, insight and service excellence at offices, factories, airports, hospitals and other locations across the globe. In 2020, ISS Group's global revenue amounted to DKK 70 billion. For more information on the ISS Group, visit www.issworld.com.

About LED iBond International A/S

Founded in 2014, LED iBond International offers innovative solutions for integrating light and data, based on the company's deep knowledge of modern LED technology and many years of development. The patented technology includes the lightest and thinnest LED basis available, offering a unique value proposition combining total design flexibility, full IoT integration and low total costs of ownership. LED iBond's technology has been deployed in many projects, ranging from intelligent shelf lighting to large scale indoor illumination projects such as the installation of 3.2 kilometres of Tracy®, the company's innovative flagship product, at DTU, the Technical University of Denmark.

Due to the data transfer capabilities, superior form factor and cooling properties of the technology platform, LED iBond is focusing on three key markets: smart housing, UV disinfection and vertical farming, all projected to show significant growth in the years to come.

LED iBond International A/S is admitted to trading on Nasdaq First North Growth Market Denmark (ticker: LEDIBOND).
