NCC to continue extensive refurbishment of Öland Bridge

NCC has been commissioned by the Swedish Transport Administration to continue and complete the extensive refurbishment of the Öland Bridge, which began in 2025. The refurbishment – one of Sweden's largest bridge maintenance projects – is being carried out while the bridge remains in service. The order value is approximately SEK 680 million.

NCC's expanded contract for the Öland Bridge includes concrete repairs to 134 of the bridge's 155 spans. A total of 13 of the bridge's spans were repaired in 2025 when NCC implemented the first phase of the project. The lessons learned in this stage will be applied in the upcoming contract.

"The Öland Bridge is one of Sweden's most important bridges, and the maintenance works are crucial to ensure that it remains serviceable for many years to come. We look forward to implementing this project in cooperation with NCC," says Stefan Holst, Project Manager at the Swedish Transport Administration.

"The Öland Bridge is an iconic Swedish landmark, and we are honored to help ensure it remains a part of the landscape for years to come. We will draw on the valuable experience gained in our initial renovation phase to ensure that work is carried out in a safe and efficient manner," says Tomas Brannemo, Head of NCC Infrastructure.

At about six kilometers in length, the Öland Bridge is the only land connection between Öland and the mainland. Work will be carried out while the bridge remains in service, using scaffolding fixed beneath the bridge itself and secured to the beams and bridge deck.

Work will commence in 2027 and is scheduled for completion in 2030. The order value is approximately SEK 680 million and the order will be registered in the NCC Infrastructure business area in the fourth quarter of 2026.
