NCC commences production phase for Trelleborg facility

NCC and Specialfastigheter are partnering to construct one of Sweden's largest correctional facilities in Trelleborg for the tenant, the Swedish Prison and Probation Service. Since autumn 2025, the parties have collaborated closely to plan and design the project, which is being implemented in phases. Production is now commencing with the earth and groundworks and culvert construction phases, with a total order value of approximately SEK 500 million.

NCC's assignment involves the construction of a new correctional facility for just over 800 inmates and 600 employees. With a total building area of approximately 110,000 square meters, the facility will accommodate a detention center, a prison and premises for the National Transport Unit of the Swedish Prison and Probation Service.

"Building correctional facilities and detention centers requires highly specialized skills, and the sheer size of the facility in Trelleborg adds further dimensions and challenges that must be considered. NCC has a strong track record of implementing large high-security projects, which will be valuable as this important project now enters the next phase," says Niklas Sparw, Head of NCC Building Sweden.

NCC has extensive experience in completing security classified projects and has a team of experts that is dedicated to such assignments. For these projects, particularly high requirements are imposed on advanced security solutions, technical expertise, special logistics and secure information management at every phase.

The entire project is scheduled to be completed in 2031. Earlier in 2026, NCC registered orders worth approximately SEK 500 million for planning and time-critical earthworks.

The first phases of production – covering earth and groundworks and culverts – will now commence. The total order value of the phases of SEK 500 million will be registered among orders in the NCC Building Sweden business area for the fourth quarter of 2026.
