CT001 ready for shipment to initial U.S. hospitals as launch activities commence

- **Initial U.S. commercial supply of CT001 now available for shipment**
- **Launch activities initiated with selected U.S. hospitals**

Copenhagen, Denmark - 27 August 2026 - Cessatech A/S (“Cessatech” or the “Company”), a late-stage paediatric specialty company developing and commercializing hospital medicines for children, today announced the successful release of CT001 by its U.S. manufacturing partner, STAQ Pharma. This makes CT001 (sufentanil/ketamine nasal spray) available for shipment to initial U.S. hospitals and enables launch activities to begin. The release of the first commercial batch marks an important operational milestone, establishing initial product availability in the United States and enabling Cessatech and its collaboration partners to begin launch activities with selected hospitals.

Comment from Jes Trygved, CEO

“We would like to recognise the team at STAQ Pharma for the significant effort, dedication and expertise that made this important milestone possible. Completing and releasing the first commercial batch of CT001 is a major achievement and reflects the hard work invested throughout the manufacturing process. We now look forward to working closely with our partners as we begin the next phase and build a successful launch in the United States. We recognise that establishing CT001 in the market will take time, but this milestone provides an important foundation for the work ahead.”

About CT001

CT001 is a nasal spray developed for the rapid relief of acute moderate to severe pain in children aged 1-17 years, including pain associated with medical procedures. Designed for ease of use and fast onset of action, CT001 has demonstrated an acceptable tolerability profile and a safety profile consistent with the known properties of its components, with no new safety concerns identified. The product contains a fixed combination of two well-known pain-relief medicines, ketamine and sufentanil,

About Cessatech

Cessatech is a pivotal-stage paediatric biotech company developing first-in-class specialty hospital medicines for children, focused on high-impact unmet needs in acute and emergency care. The company’s lead program, CT001, is advancing towards regulatory and commercialisation in key markets. Cessatech operates a capital-efficient, partnership-driven model, combining a lean, experienced team with best-in-class partners for development, manufacturing and commercial execution across key markets. Headquartered in Hellerup, Denmark, Cessatech is led by a seasoned leadership team with a strong track record in drug development and product launches in Europe, the US and Asia.
