

# INTERIM REPORT

JANUARY – JUNE 2022

# INTERIM REPORT 2022

January 1 – June 30, 2022

*"The Company" or "Modus" refers to the parent company Modus Therapeutics Holding AB with organization number 556851-9523. "Subsidiary" or "Modus Therapeutics" refers to the subsidiary Modus Therapeutics AB with organization number 556669-2199.*

## The second quarter in figures

- The loss after tax amounted to TSEK 2 992 (2 533).
- The loss per share amounted to SEK 0,19 (0,26).
- The cash flow from current operations was negative in the amount of TSEK 3 228 (2 299).

## The first half-year in figures

- The loss after tax amounted to TSEK 6 057 (3 691).
- The loss per share amounted to SEK 0,38 (0,43).
- The cash flow from current operations was negative in the amount of TSEK 10 773 (3 465).

## Important events during the second quarter

- Modus participated in Swiss Nordic Bio.
- Modus participated in BIO-Europe 2022.
- Modus presented at LSX world congress.
- The annual general meeting was held on 11 May 2022.
- Modus Therapeutics secures access to bridge financing from Karolinska Development.
- Modus Therapeutics Holding AB announces results in warrant redemption.
- Modus Therapeutics presents at Småbolagsdagarna.

## Important events after the end of the period

- Modus Therapeutics concludes on bridge financing agreement from Karolinska Development.

# Financial overview

# Recruitment picks up in Phase 1b clinical study

At Modus Therapeutics we continue to effectually navigate a constantly changing environment, and progress towards our important goal to successfully develop sevuparin for the treatment of sepsis/sepsis shock and other conditions with systemic inflammation.

As the summer season nears its end, we are pleased to confirm that our Phase 1b clinical trial remains on track to complete recruitment by the end of Q3 2022, in line with our updated timelines announced in May.

The revised timeline was due to lasting effects of the Covid-19 pandemic that resulted in a slowdown in recruitment of healthy volunteers. In response we updated the selection criteria for the Phase 1b trial, including the enrolment of female subjects, which has successfully improved the pace of recruitment. However, we are continuously monitoring the COVID patterns to ensure that we maintain proactiveness in case of any further such impact to our trials.

The Phase 1b LPS challenge study is evaluating the effects of sevuparin, on the provoked symptoms of healthy volunteers who have been injected with the bacterial toxin lipopolysaccharide (LPS). We expect to announce the results of this study in Q4 2022.

In parallel with finalizing the Phase 1b study, we are working on the preparations for our planned Phase 2a study in patients with sepsis. The Phase 2 study design will be informed by the data from our Phase 1b study.

We have been able to maintain the momentum behind the development of sevuparin as a result of securing additional bridge financing of SEK 11.5 million from our largest shareholder, Karolinska Development. The continued support reflects their confidence in the potential of sevuparin to become an important new treatment for sepsis.

Modus Therapeutics' strategy is driven by the fact that there have been no real advances in the treatment of sepsis in recent times, outside of antibiotics and further supportive critical care treatments. It is our intention to provide a step-change therapy for what remains a global healthcare concern with a both a high morbidity and mortality rate. Sepsis affects an estimated 49 million people worldwide each year, and as many as 80% of septic shock patients could potentially be saved with rapid diagnosis and better treatment alternatives.

We estimate that the market value for addressing the unmet medical need with a new specific sepsis therapeutic would be around USD 6 billion in septic shock and USD 27 billion for an earlier intervention in the sepsis reaction.

As we make confident progress with sevuparin in sepsis, we also continue our investigations of the drug in other disease areas. This includes severe malaria, in which sevuparin is currently being evaluated in a clinical study led by Professor Kathryn Maitland from Imperial College, London. In severe malaria, the parasitic infection causes a systemic inflammation syndrome which shares a number of similarities with sepsis and other severe conditions.

Awareness of sepsis and its complications are key to the development and adoption of new treatments for this major healthcare problem. According to the Sepsis Alliance, awareness levels reached new highs of 71% in 2020, during the COVID-19 pandemic. Although this has now reverted to pre-pandemic levels of around 65% as reported in 2018 and 2019, there is clearly potential for this to improve again. As a company deeply committed to improving sepsis care, we acknowledge the importance of working to increase public awareness for sepsis and in contribution to this we actively discuss sepsis and our sevuparin development program at both local and international events and meetings.

With several clinical studies ongoing in various stages of advancement, Modus' momentum is stronger than ever, and we are looking forward to the first key data readouts from sevuparin's development later this year.

John Öhd

CEO

## ABOUT MODUS

Modus is a Swedish biotechnology company that develops its proprietary polysaccharide sevuparin as a treatment for sepsis and septic shock with the possibility of also addressing other forms of systemic inflammation. There are currently no approved drug treatments specifically aimed to treat these conditions. Modus' ambition is therefore to initiate a paradigm shift in sepsis care and potentially for other similar systemic inflammatory conditions.

Modus is a biotechnology company working with its patent-protected drug candidate sevuparin to develop an injectable treatment for sepsis and septic shock. Sepsis and septic shock are one of the leading causes of death in intensive care units globally and occur when a bacterial infection causes an exaggerated immune response, resulting in strong inflammation that can lead to harmful substances being secreted into the blood by activated white blood cells. These substances risk damaging the inside of the blood vessels eventually causing leakage of plasma into the tissue.

The consequence of this course of events is an increased risk of hampered organ function, and if the condition is not treated, it may lead to acute organ failure and severe tissue damage. As a result, sepsis can develop in a short time from a common infection to becoming life-threatening affecting the heart, lungs, kidneys, and brain. There is currently no approved drug that specifically treats sepsis or septic shock. Modus starting point is that sevuparin has the potential to protect blood vessels from leakage, by binding and neutralizing the harmful substances secreted into the blood during sepsis, thus preventing the condition from worsening and progressing further into septic shock.

### Sevuparin's mode of action

Based on available preclinical data, heparinoids – the subgroup of polysaccharides to which sevuparin belongs – have been implicated as a potential specific treatment for sepsis. Its potentially beneficial properties in sepsis and systemic inflammation have been observed by several researchers using preclinical models. , , It is well-known that heparinoids have blood-thinning effects, which limits dosage to avoid unnecessary risk of bleeding. Sevuparin has been developed with significantly lower levels of blood-thinning but with retained anti-inflammatory properties, enabling sevuparin to be dosed significantly higher than other comparable heparinoids.

Thanks to the unique profile with greatly reduced blood-thinning properties and a confirmed safety profile, sevuparin has the potential to harness these potential properties in sepsis/septic shock and other conditions with systemic inflammation. Examples of other such conditions are severe trauma, burns, major surgery and severe malaria to name a few. Based on preclinical research, sevuparin is believed to counteract systemic inflammation by binding and neutralizing harmful

substances secreted by activated white blood cells in sepsis and septic shock, providing robust vascular protection. Sevuparin could thereby break the molecular chain of events that lead to loss of blood vessel integrity, plasma leakage, and ultimately failing organ function.

Modus continuously evaluates possible research collaborations that can increase the understanding of sevuparin's mode of action. An excellent example of this is the collaboration during Q2 with Imperial College London around severe malaria. Such collaborations with academic institutions can sometimes lead to so-called investigator-initiated clinical studies. Furthermore, Modus also collaborates externally to enable new patentable uses of sevuparin.

### Market

According to the WHO, sepsis may be the leading cause of death in the world, and in 2017, sepsis accounted for approximately 11 million deaths, corresponding to 19.7 percent of global mortality. The most serious stage of sepsis, septic shock, is a leading cause of death in intensive care units globally, with a mortality rate usually exceeding 30 percent. There is no pharmaceutical product available that is specifically developed to treat patients with sepsis and septic shock, although most are already being treated with antibiotics for the infection that caused the condition. Due to the lack of effective treatment, it is cost-intensive to diagnose and treat sepsis / septic shock. In the United States, it is estimated that sepsis costs U.S. health care about \$ 22 billion annually, a figure that has increased by about \$ 5 billion since 2012.

Sepsis is a vital indication and thus places itself in a high-price segment for medicines. The company XPLICO specializes in the valuation of life science companies and has, on behalf of Modus, estimated that the total market potential for sevuparin in septic shock for the 7 major markets amounts to 6 billion USD. The potential for U.S. here amounts to USD 4.9 billion and the market potential in the EU and Japan amounts to USD 1.1 billion. In a recent analysis performed by Carlsquare assuming an earlier deployment of sevuparin in the sepsis treatment cascade the estimated total market potential for the 7 major markets amounted to 27 billion USD in 2036. The Board of Director's assessment is that the gross margin for sevuparin

at a market introduction amounts to approximately 90 percent.

### Completed studies

Sevuparin has undergone preclinical toxicological testing enabling dosing for up to 14 days in clinical trials. Furthermore, preclinical in vivo efficacy studies have been performed previously in mice indicating beneficial effects on several disease models for, among others, sickle cell disease and malaria, as well as in mouse and in vitro human experimental systems for sepsis.

In clinical trials with healthy phase I volunteers, sevuparin has been shown to be safe and tolerable with single and multiple intravenous dosing within clinically relevant dose ranges. Two patient studies (phase Ib and II) also showed the inhibitory effects of sevuparin on the ability of the malaria parasite in its binding to blood cells and the vessel wall. In a patient study for the treatment of acute sickle cell disease, sevuparin was shown to have a favorable safety profile, although no improvement in disease status was observed compared with placebo.

# DEVELOPMENT OF PROFIT AND FINANCIAL POSITION

## Second quarter

### Operating profit/loss

Operating loss for the period April-June 2022 amounted to TSEK 2,992 (2,533). The increase in costs compared to the previous year is largely a result of the planned initiation of the Phase 1 b study and an increase in staffing. In a comparison with previous year, the result is also affected by an increase in costs linked to the company now being listed on Nasdaq First North.

## First half-year

### Operating profit/loss

Operating loss for the period January-June 2022 amounted to TSEK 6,057 (3,961). The delay of the phase 1b study has a positive impact on operating profit and cash flow compared to plan and moves spending from Q2 to Q3. The increase in costs compared to the previous year is largely a result of the planned initiation of the Phase 1 b study and an increase in staffing. In a comparison with previous year, the result is also affected by an increase in costs linked to the company now being listed on Nasdaq First North.

### Cash flow, investments, and financial position

At the beginning of the period, cash and cash equivalents amounted to TSEK 13 103, and at the end of the period to TSEK 9 876. Cash flow from current operations was negative to the amount of TSEK 3 228 (2 299), of which changes in working capital amounted to a negative TSEK 236 (positive 234). The cash flow from financing activities amounted to TSEK 0 (0). The total cash flow amounted to a negative TSEK 3 228 (2 349).

### Cash flow, investments, and financial position

At the beginning of the period, cash and cash equivalents amounted to TSEK 20 648, and at the end of the period to TSEK 9 876. Cash flow from current operations was negative to the amount of TSEK 10 773 (3 465), of which changes in working capital amounted to a negative TSEK 4 716 (positive 496), which is mainly attributable to a decrease in accounts payable and accrued expenses. The cash flow from financing activities amounted to TSEK 0 (0). The total cash flow amounted to a negative TSEK 10 773 (3 515).

## IMPORTANT EVENTS DURING THE QUARTER

### Modus Therapeutics participated in Swiss Nordic Bio

On March 23, 2022, the company participated in Swiss Nordic Bio, Zurich Switzerland.

### Modus Therapeutics participated in BIO-EUROPE SPRING

On March 28-31, 2022, the company participated in the BIO-EUROPE SPRING.

### Modus Therapeutics presented in LSX World Congress

On May 10-11, 2022, Modus participated and presented in LSX World Congress, London, UK.

### The Annual General Meeting was held on May 11, 2022

The AGM resolved to adopt the income statement and balance sheet, consolidated income statement and consolidated balance sheet, determination of profit allocation, and the discharge from liability of the Board and the Managing Director.

All current board members were re-elected, and Viktor Drvota was re-elected as chairman of the board.

The annual general meeting resolved to grant authorization to the board, for a period that does not extend past the date of the next annual general meeting, on one or several occasions, with or without pre-emptive rights for the shareholders, to resolve on the issue of new shares, convertibles and/or warrants.

The purpose of the authorization is to enable the financing, commercialization and development of

the Company's projects and to provide flexibility in commercial negotiations.

### Modus Therapeutics secures access to bridge financing from Karolinska Development

On May 12, 2022, Modus Therapeutics announced that it has secured access to bridge financing of up to SEK 11.5 million from its largest shareholder, Karolinska Development. Access to this potential funding will ensure that momentum of clinical development of the company's lead asset, sevuparin, for the treatment of sepsis is sustained. This includes the planning for the forthcoming Phase 2a study in patients with sepsis that is expected to begin before the end of 2022.

### Modus Therapeutics Holding AB announces results in warrant redemption

On June 9, 2022, the exercise period for Modus Therapeutics Holding AB's warrants of series TO 1 ended. No warrants of series TO 1 have been exercised.

### Modus Therapeutics presents at Småbolagsdagarna

On June 13, 2022, Modus Therapeutics presented at Aktiespararnas event Småbolagsdagarna

## Important events after the end of the quarter

### Modus Therapeutics concludes on bridge financing agreement from Karolinska Development

On June 30, 2022, Modus Therapeutics signed the bridge loan agreement of SEK 11.5 million from its largest shareholder, Karolinska Development at market conditions and with a latest draw-down date set to September 1.

## OTHER DISCLOSURES

### Ownership structure

At the end of the first quarter, there were 1 053 shareholders in Modus Therapeutics Holding AB, of which the three largest shareholders owned 66% of the capital and votes. The total number of shares was 16 100 050. The largest shareholders, on June 30, 2022, were Karolinska Development AB, KDev Investment AB and John Öhd.

### Parent Company

Modus Therapeutics Holding AB, corporate identity number 556851-9523 is the parent company of the group and was formed in 2011. The actual operations are conducted by the fully owned subsidiary Modus Therapeutics AB. As per June 30, 2022, there were two employees, the CEO and the groups finance department.

The company's main task is of a financial nature to fund the group's operational activities. Net sales for the period reached TSEK 370 (228). The loss for the period amounted to TSEK 3361 (2 656). The company's net sales consist of invoiced consultancy fees to the fully owned subsidiary Modus Therapeutics AB.

### Employees

The number of employees at the end of the period was 2 (2).

### Financing

The Board of Directors regularly reviews the company's existing and forecast cash flow to ensure that the company's funds and resources necessary to pursue operations and strategic focus adopted by the board. As Modus is primarily a research and development company, the company's long-term cash needs are determined by the scope and results of the clinical research conducted with regard to the company's drug candidate sevuparin. As of the last June 2022, the Group's cash and cash equivalents amounted to SEK 9,9 million.

On June 9, 2022, the exercise period for Modus Therapeutics Holding AB's warrants of series TO 1 ended. No warrants of series TO 1 were exercised.

On June 30, 2022, Modus Therapeutics signed the bridge loan agreement of SEK 11.5 million from its largest shareholder, Karolinska Development. This facility will enable the maintained momentum of sevuparin's development as it progresses through clinical studies to a point where the Phase 1b data

has been disclosed and the future Phase 2a sepsis patient trial preparations are further progressed. Modus is exploring future possibilities for the funding needed to be able to carry out the development project beyond the current Phase 1b study.

There are no guarantees that the required capital can be raised to finance the development on favorable terms, or that such capital can be raised at all. The Board and the CEO make the assessment that these projects will be able to be completed and put into use, and they also make the assessment that the prospects for future capital raising are good provided that the development project delivers according to plan.

Should capital raising activities according to the above not be fulfilled, there is a risk regarding the group's continued operations.

### COVID-19 pandemic

During the beginning of 2022, the global vaccination programs and the attenuation of pandemic waves have led to a gradual return of life to a more normal state in society. However, the introduction of the new COVID mutation Omicron at the end of 2021 led to the reintroduction/prolonging of restrictions in many countries.

In December 2021, Modus started its phase 1b clinical study in the Netherlands and upon close monitoring, a pattern of higher recruitment variability from month to month compared to expected emerged during conduct in 2022. The COVID effects contributed to a delay of recruitment in the Phase 1b study which was communicated in May 2022. At the time of Q2 reporting, the Phase 1b study is on track with the new timeline to conclude recruitment by end Q3.

The COVID pattern is followed closely in order to facilitate future updates on any further impact on planned timelines. It is still important to maintain awareness of potential disruptions in planned clinical activities due to fluctuating and potentially increasing COVID infection and resulting vaccination programs around Europe.

In a longer perspective from 2022, continued disruptions due to unforeseen infection development can unfortunately not be completely ruled out and therefore still constitute an element of uncertainty in Modus' planned operations.

### Risks and uncertainty

Modus Therapeutics risks and uncertainties include, but are not limited to, risks related to drug

development and financial risks such as future financing. Further information on the Company's risk exposure can be found on page 31-32 of Modus Therapeutics Holding's annual report for 2021.

# NOTES TO THE FINANCIAL REPORTS IN SUMMARY

## Note 1 Accounting principles

Modus Therapeutics Holding AB's consolidated accounts have been prepared in accordance with the annual accounts act and the Swedish accounting standards board's general advice BFNAR 2012: 1 Annual Report and the Consolidated Financial Statements (K3). The interim report for the company has been prepared in accordance with chapter 9 of the annual accounts act and the same accounting principles have been applied as in the most recent annual report.

## Note 2 Transactions with related parties

During the period, the parent company Modus Therapeutics Holding AB has invoiced TSEK 370 (228) to the fully owned subsidiary Modus therapeutics AB, which corresponds to 100% of the parent company's turnover for the period. During the reporting period there were no other transactions with related parties that had any material impact on the group or parent company's position and earnings.

## Note 3 Incentive program

At the Annual General Meeting on May 3, 2021, it was decided to issue a maximum of 215,000 warrants to a long-term incentive program for employees and consultants in the Company called "Incentive Program 2021/2024". The scope of the program corresponds to a maximum of 2 percent dilution before listing. Each warrant entitles the holder to subscribe for one new share in the Company at a subscription price corresponding to 130 percent of the subscription price applicable upon listing on Nasdaq First North SEK 6.40. Subscription of new shares with the support of the warrants shall take place during the period from 1 September 2024 to 31 October 2024. At the date of this report, 172,000 warrants had been granted and

acquired. In addition, there are no outstanding share-related incentive programs in the Company.

## Not 4 Equity

The share capital of the Parent Company consists only of fully paid ordinary shares with a nominal (quota value) of SEK 0,060/share. The company has 16 100 050 shares.

Shares/SEK	2022.01.01 -2022.06.30	2021.01.01 -2021.06.30
<b>Subscribed and paid shares:</b>		
At the beginning of the period	16 100 050	137 297 153
Share merger		-128 697 153
Offset issue		2 343 750
Rights issue		
<b>Subscribed and paid shares</b>	<b>16 100 050</b>	<b>10 943 750</b>
Shares for sharebased payments	-	-
<b>Sum at the end of the period</b>	<b>966 003</b>	<b>656 625</b>

During 2020, the company carried out new issues on two occasions amounting to a total of 113,520,087 shares.

In the second quarter of 2021, the company completed a share merger at a ratio of 1: 15.96 and a set-off issue (see Note 2). In the third quarter of 2021, the company issued an issue of 5,156,300 units, which corresponds to 5,156,300 shares and 5,156,300 warrants. A unit consists of one share and a warrant of the TO1 series. The total number of shares thereafter amounted to 16,100,050 and with a quota value of SEK 0.060 / Share.

On June 9, 2022, the exercise period for Modus Therapeutics Holding AB's warrants of series TO 1 ended. No warrants of series TO 1 were exercised.

# Signatures

The Board of Directors and the CEO provide their assurance that this interim report provides an accurate view of the operations, position and earning of the group and the parent company, and that it also describes the principal risks and uncertainties faced by the parent company and the companies included within the group.

This report has been prepared in both Swedish and English. In the event of discrepancies between the versions, it is the Swedish version that applies.

This interim report has not been subject to review by the Company's auditors

## Definitions

### Financial key ratios

- **Operating profit:** Operating income less operating expenses.
- **Equity/Asset ratio:** Equity at the end of the period divided by total assets at the end of the period.
- **Earnings per share for the period before dilution:** Profit for the period divided by the average number of shares before dilution.
- **Earnings per share for the period after dilution:** Profit for the period divided by the number of shares after dilution. Earnings per share after dilution is the same as before dilution because potential ordinary shares do not cause dilution.
- **Shareholder's equity per share:** Equity divided by average number of shares.
- **R&D expense/operating expense, %:** Research and development costs divided by total operating costs.
- **Number of employees (average):** Weighted average number of employees in the relevant period.
