AddSecure launches new GroupTalk GT25 4G PoC radio for faster, safer, and more efficient team communication

The new radio lets teams connect without distance limits, using advanced functions like live video, location tracking, external alarm integration, and seamlessly links radios, smartphones, and dispatch systems.

[AddSecure](#), a leading European provider of secure IoT connectivity and end-to-end solutions, today announced the launch of the GroupTalk GT25, a modern and rugged PoC radio (Push-to-talk over Cellular) designed for teams that rely on instant, reliable communication.

With one-button voice communication over 4G and Wi-Fi, the GT25 keeps teams connected wherever they are — and its built-in panic alarm button ensures that help can be summoned immediately in critical situations, combining fast, simple communication with enhanced safety.

The GT25 combines the simplicity of a traditional Push-to-Talk radio with the flexibility of a modern Android smartphone, offering instant global communication, emergency response features, and multimedia capabilities (video and location services) in one rugged device.

“With the GT25, teams can respond instantly to any situation, coordinate effortlessly across multiple locations, and feel confident that help is always just a button away. Unlike other solutions on the market, it works seamlessly across radios, smartphones, and PC dispatch systems, providing our customers with reliable, secure, and efficient communication wherever they are,” said Nicholas Whiting, VP Alarm Signalling, AddSecure UK.

Designed for organisations where fast, coordinated communication is essential, including security teams, emergency services, airports, local authorities, manufacturing, transportation, retail, construction, hospitality, festivals, and events, the GT25 removes the delays and risks caused by fragmented communication tools. It enables teams to coordinate quickly, respond effectively, and stay connected through a single, reliable device.
