Banham Security extends partnership with AddSecure

The renewed two-year agreement strengthens the companies' collaboration in alarm signalling and opens the door to a broader strategic partnership.

Banham Security, one of the UK's established security providers, has extended its agreement with AddSecure for a further two years. Under the agreement, Banham will continue to use AddSecure's alarm signalling solutions across its UK operations.

The extended agreement provides a foundation for the companies to develop their relationship further. Together, Banham and AddSecure will explore how AddSecure's connected solutions can support Banham's customers, Alarm Receiving Centre (ARC) operations and continued business growth.

Potential areas of collaboration include connected alerting, secure connectivity, operational communications, CCTV applications, lone worker protection and emergency response. The companies will also explore white-labelling, product development and opportunities to integrate additional connected services into Banham's ARC offering.

"Extending our agreement with Banham is an important step in developing our long-term relationship. By combining Banham's security expertise and established ARC operations with AddSecure's broad portfolio of secure connected solutions, we see strong potential to create additional value for Banham and its customers," says Nick Whiting, VP Alarm Signalling at AddSecure.

"AddSecure gives us the technology and flexibility to expand our connected services and continue protecting both people and property. We look forward to building on our relationship and exploring new opportunities together," says Roger Kay, Associate Director ARC, Banham Security.

The next stage of the partnership will focus on identifying specific applications, commercial opportunities and integration requirements.
