

Swedish 3D printer manufacturer Wematter signs agreement with Czech reseller 3D Manufaktura

Wematter's Gravity SLS 3D printer will be available through 3D Manufaktura in Czechia

Swedish 3D printer manufacturer Wematter enters a distribution agreement with the Czechish reseller 3D Manufaktura to establish a sales and service network for the Gravity 3D printer in Czechia. The partnership is a step toward Wematter's internationalisation, offering the European market access to the Gravity SLS 3D printing system 2023.

The Gravity SLS 3D printing system is a complete SLS 3D printing system, including hardware, software and service. It can be used to print a broad range of powders, including PA6, PA11, PA12, PP and TPU, many in both white and black. It can handle ESD-safe and Food-safe materials and more.

The growing popularity of the Gravity SLS 3D printing system is also driven by it being an unusually accessible system. No operator is needed. Instead, anyone at the office or in the factory that is given access can print excellent SLS 3D prints with it from, any computer supported by the easy-to-use software. The printer is CE certified for usage in an office environment, it is connected to a domestic power outlet, and there is no need for extra ventilation.

About Wematter AB (publ)

Swedish 3D printing company Wematter's pioneering solution gives hospitals, offices, and workshops access to a comprehensive system. For the first time, employees can easily print components themselves with the same strength and quality as traditional technology. Wematter's proprietary end-to-end solution enables customers to accelerate product development and in-house volume production. At the same time, the system creates the conditions for increased flexibility, lower risk and reduced manufacturing and development costs. For more information about Wematter, visit wematter3d.com

About 3D Manufaktura

We offer professional 3D printers for printing from thermoplastics and composites. We deal with custom 3D printing, scanning and 3D modelling. We provide our customers with expert advice in the field of additive manufacturing. Within our custom 3D printing centre, we offer design models based on our own designs and those of our customers.
