

## Stegra granted additional state aid from the Industrial Leap

**Stockholm, November 26, 2025 – Today, the Swedish Energy Agency announced that Stegra has been granted about €37 million from the Industrial Leap. The grant goes towards the establishment of Stegra’s fully integrated near zero emission steel production facility in Boden.**

In September 2024, Stegra was awarded €100 million from the Industrial leap after the European Commission earlier the same year approved, under the EU State aid rules, a €265 million Swedish measure made available in part through the Recovery and Resilience Facility. Today, an additional €37 million in grants have been announced by the Swedish Energy Agency.

“We are grateful for the Swedish Energy Agency’s decision. It gives us the possibility to strengthen Swedish and European competitiveness. There is still a gap to what the EU has approved, and we hope that further steps can be taken to close it and provide a more level playing field in relation to other projects”, says Henrik Henriksson, CEO Stegra.

### **About Stegra**

Stegra is an industrial impact scale-up in the process of building its first plant for large-scale production of green hydrogen, green iron and green steel. The company was founded in 2020 as H2 Green Steel and changed name to Stegra in 2024 to reflect its purpose to decarbonize hard-to-abate industry, starting with steel. Stegra’s flagship plant is being built in Boden, northern Sweden, and its headquarters are in Stockholm. [www.stegra.com](http://www.stegra.com)
