PRESS RELEASE

Wyld Networks to collaborate with AgriSound on beehive monitoring pilot

Wyld Networks today announces a partnership with AgriSound, the acoustic technology innovators, to develop solutions to aid in the maintenance and optimization of the pollination environment.

By combining acoustic technology with environmental sensors, AgriSound have developed a range of innovative products that aid in maintaining an optimal pollination environment, necessary not just for the survival of our future pollinators, but to support agricultural productivity and promote the health of the planet.

Without pollinators, especially bee colonies, 70% of all food crops would be at risk. Pollination is crucial to maintaining healthy ecosystems by encouraging natural biodiversity and removing carbon from the atmosphere through increased plant growth.

“Wyld’s innovative satellite solution solves the ongoing issue of how to get data from remote locations,” says Casey Woodward, CEO of AgriSound. “Together with Wyld we can solve a huge problem for pollinator management – how to get data back from difficult to reach locations. Wyld will help us to bring previously unavailable data to our platform to add value to our customers.”

“AgriSound’s game changing acoustic technology combined with Wyld’s satellite IoT connectivity is set to have a significant impact on global pollination monitoring,” said Alastair Williamson, CEO of Wyld Networks. “Wyld are delighted to be delivering sensor-to-satellite data directly from the field to the brilliant AgriSound platform.”
