Scania publishes 2014 Annual Report and Sustainability Report

Scania's Annual Report and Sustainability Report for 2014 are available from today on scania.com. The Annual Report, which outlines Scania's operations, strategy and financial performance, is available in English and Swedish, while the Sustainability Report, which provides in-depth reporting on sustainability performance, is available in English.

The Sustainability Report for 2014 highlights continued achievements in reducing the carbon footprint for customers as well as in Scania's own operations. Scania has the stated aim of being the leader in sustainable transport.

"I see no conflict between logistical efficiency, CO₂ reductions, social and ethical responsibility and strong financial performance; to me, they are a prerequisite," says Scania's President and CEO Martin Lundstedt.

A key message is that the potential to increase the efficiency of today's transport services is huge and creates several new business opportunities for Scania. Scania is well-positioned to optimise logistics flows — not only for Scania's customers but for their customers as well. This requires a deep understanding of the logistics flow from production to distribution and sales — an approach that is firmly established at Scania.

Important areas going forward will be integrated transport solutions, alternative fuels and hybridisation with greater emphasis on electrification.

"We want to bring a new way of thinking about transport – one that is innovation-driven, systems-based and founded on collaboration," says Martin Lundstedt. "By partnering with our customers and other stakeholders, we build real understanding of what is needed to transform transport systems and embed efficiency throughout the value chain."

Scania is one of the world's leading manufacturers of trucks and buses for heavy transport applications, and of industrial and marine engines. Service-related products account for a growing proportion of the company's operations, assuring Scania customers of cost-effective transport solutions and maximum uptime. Scania also offers financial services. Employing some 42,000 people, the company operates in about 100 countries. Research and development activities are concentrated in Sweden, while production takes place in Europe and South America, with facilities for global interchange of both components and complete vehicles. In 2014, net sales totalled SEK 92.1 billion and net income amounted to SEK 6 billion. Scania's press releases are available on www.scania.com
