BPC secures order from multinational oil and gas company for biogas production

BPC Instruments AB ("BPC" or the "Company"), proudly announces a purchase order from the California-based branch of a prominent multinational oil and gas company. The order encompasses delivery of two comprehensive AMPTS[®] III systems and two BPC[®] Bioreactors CSTR-10S, with a total order value exceeding 82,000 USD. These instruments will serve as crucial analytical tools, supporting the rapid business development of renewable natural gas in North America. The revenue generated from the order is anticipated to be included in the fourth quarter of this year.

CEO Dr. Jing Liu comments:

"I'm thrilled to witness an increasing number of multinational petroleum companies expand and accelerate the growth of their strategic bioenergy business through acquisitions and increased investments in expanding their presence in the biogas industry. I'm also particularly proud to receive this first order from this multinational oil and gas company as it serves as an exemplary case for other significant industrial clients considering investments and contributions in biogas and biomethane production. This order also demonstrates the increased interest that our next-generation instruments are receiving as AMPTS[®] III was launched eight months ago. The order further underscores the critical role of feedstock quality control and process optimization of biogas production, affirming the effectiveness of BPC's full analytical solution offering in the biogas and biomethane sector."
