

BPC Instruments receives ISO 9001 certification for quality management

PRESS RELEASE
2026-06-10

Lund, Sweden, June 10, 2026 – BPC Instruments AB (publ), a biotech company specialising in automated laboratory analysis, has received ISO 9001 certification for its quality management system. The certification has been issued by RISE, Research Institutes of Sweden.

ISO 9001 is an internationally recognised standard that sets requirements for systematic quality management. It covers how an organisation identifies customer requirements, defines responsibilities, manages and documents its processes, monitors performance and works with continual improvement. The certification confirms that BPC has established a structured quality management system to support consistent and reliable ways of working across the organisation.

The certification follows BPC's recent move into its new 3,600-square-metre facility in Lund. The premises provide improved conditions for the Company's operations and additional capacity for future growth. Together, the new facility and the ISO 9001 certification strengthen BPC's operational foundation as the Company continues to develop.

“Receiving the ISO 9001 certification is an important milestone for BPC and the result of dedicated work across the organisation. It comes at a natural point in our development, as we have just moved into our new facility in Lund”, notes BPC Instruments’ CEO Jing Liu. “Together, these steps give us a stronger foundation as we continue to grow and provide our customers and partners with the consistency and reliability they expect from us”.
