

Inify Laboratories has signed an agreement with Region Jämtland Härjedalen for prostate cancer diagnostics

STOCKHOLM – April 24, 2026 - Inify Laboratories, a unique laboratory service that provides diagnostics in pathology, has entered into an agreement with the Swedish Region Jämtland Härjedalen. The agreement involves the delivery of specialised prostate cancer diagnostics with the aim of shortening waiting times for results to patients with suspected cancer.

"The collaboration means that the region's patients undergoing prostate cancer investigation are offered diagnostics in a completely digital and traceable workflow with the highest possible patient safety", says Meriana Findakly, Department Manager of Laboratory Medicine in Region Jämtland Härjedalen.

In large parts of the Western world, pathology is under enormous pressure, with an extensive workload and limited resources. One of the parts that is affected is prostate cancer diagnostics, resulting in long and varying lead times. Like most other regions in Sweden, Region Jämtland Härjedalen has challenges in achieving the targets that have been developed within the framework of the standardised patient pathway targets for prostate cancer, stipulating that the patient should be notified within 11 days of the examination.

The goal of the collaboration is to shorten waiting times for patients while making it easier for urologists to interpret test results and plan treatment. Guaranteed and short response times have the potential to facilitate planning. In addition, urologists receive a visual and standardised pathology report that clearly shows where there is cancer or not, which in turn can reduce the risk of misinterpretation.

The region's prostate biopsy samples will be sent to Inify Laboratories in Stockholm for tissue preparation and digitisation. Inify's pathologists make a diagnosis with the support of the company's AI-based decision support tool and the report is made available for the urologists, well in advance to meet the SVF targets.

"We are very much looking forward to the collaboration, which will also be a confirmation of Inify's capacity to deliver diagnostics to all parts of Sweden and thus contribute to equal care with shortened waiting times and high quality," says Maria Holmberg, Sales and Marketing Manager at Inify Laboratories.

###

The future of diagnostics

Inify Laboratories offers diagnostics through specialised laboratory services in histopathology, with a focus on streamlining patient pathways. The company performs clinical diagnostics in prostate cancer and gastroenterology, providing an integrated service that spans from early sample handling to final diagnosis. The laboratory system is scalable both in handling large volumes of patient samples and for replicating in new locations.

Quality and response times are optimised in every step - from logistics to tissue preparation and diagnosis - using a fully digital, standardised and AI-assisted workflow. The diagnosis is always performed by a pathologist and is assisted by Inify's proprietary AI, proven to have world-leading precision in clinical evaluations. The entire workflow is supported by a tailor-made system that also enables development to include additional diagnostic areas.

Inify Laboratories is an international group headquartered in Stockholm, Sweden, with local laboratories in Sweden and the UK. The company's share is listed on [Euronext Growth Oslo](#) under the ticker [INIFY](#).
