

B. Braun joins the bookdialysis global holiday dialysis network

bookdialysis, most trusted holiday dialysis booking platform, today announced a strategic collaboration with B. Braun, one of the world's leading healthcare and medical technology companies.

Through this collaboration, B. Braun dialysis centres will join the curated global bookdialysis network, further strengthening access to safe, high-quality and reliable renal care for patients who wish to travel with confidence.

At a time when mobility remains a major barrier for people living with chronic kidney disease (CKD), the partnership reinforces a shared commitment to patient-centric care, clinical excellence and innovation. Together, bookdialysis and B. Braun are working to transform travel from a limitation into a possibility.

Enabling confident, seamless travel

A cornerstone of the collaboration is bookdialysis' end-to-end operational support model. Patients are guided throughout the entire journey — from treatment planning and clinic coordination to ongoing assistance before, during and after travel.

This holistic approach removes complexity and uncertainty, ensuring continuity of care while allowing patients to focus on their personal and professional aspirations. By combining B. Braun's globally recognised clinical standards with bookdialysis' specialised travel coordination expertise, patients benefit from both medical excellence and logistical reassurance.

A shared commitment to data security and trust

Both organisations place the highest priority on patient privacy and data protection. bookdialysis operates under strict international data protection and confidentiality standards, ensuring that all personal and medical information is handled securely, responsibly and in full compliance with applicable regulations.

Patients can therefore trust that their health information is safeguarded with the same rigour as their clinical care.

Evgenia Kafousi, Operations Director of bookdialysis, said: "At bookdialysis, our mission is to provide immediate, highly reliable and best-in-class support to travellers across the globe, empowering them to pursue their aspirations without compromising their health or safety.

“Our carefully curated network of high-standard clinics reflects this commitment to excellence. We are especially proud to welcome B. Braun into our network — an organisation with outstanding medical expertise and a long-standing commitment to delivering world-class renal care.

“Together, we are opening new possibilities for the global CKD community, restoring patients’ freedom to travel — even to destinations as remote as Australia — while ensuring the highest levels of safety, confidence and continuity of care. This partnership represents a significant milestone for bookdialysis as we continue redefining what is possible for medical travellers worldwide.”

Expanding access for the global CKD community

The collaboration reflects a growing recognition that people living with chronic conditions should not be restricted in their ability to explore the world. By integrating trusted clinical providers into a seamless digital booking and coordination platform, bookdialysis continues to build a global ecosystem that supports safe, accessible and fully supported dialysis travel.

For the millions of patients worldwide requiring ongoing renal therapy, this partnership represents tangible progress toward greater freedom, reassurance and improved quality of life.

About bookdialysis

bookdialysis is the world’s leading, most trusted holiday dialysis booking engine. Our user-friendly, ever-evolving and secure digital platform delivers a step-change in how Chronic Kidney Disease (CKD) travellers book their holiday treatments, allowing them to transform travelling into enriching, life-affirming experiences.

Since its establishment in 2017, bookdialysis has become the preferred online booking engine for people on dialysis who wish or need to travel, as well as a trusted partner of renal care providers and the broader CKD community. It is available in nine major languages and offers an easy, quick and simple 3-step booking process, with real-time treatment availability information and no fees attached for the user. In March 2024, bookdialysis launched its own mobile booking application, available on both Android and iOS, as part of its commitment to continuous improvement and innovative solutions. Cooperating closely with kidney patient associations worldwide, bookdialysis also organises group trips for their members every year.

Today, bookdialysis brings together a global network of over 830 certified dialysis clinics in 50 countries across four continents, offering aspiring CKD travellers and their loved ones the freedom to explore new worlds.
