

T-rank, a company within Lyvia Group, helps UC launch a new beneficial ownership service in Sweden

April 14, 2026: T-rank, a company within Lyvia Group and a leading global provider of ownership analytics, has partnered with UC to bring calculated beneficial owners and ownership structure visualisation to Swedish AML regulated customers. By combining UC's proprietary cross Nordic ownership and company data with T-rank's software, the partnership helps customers meet AMLR UBO verification requirements, reduce manual work, and shorten onboarding and CDD.

The service calculates integrated ownership and voting power and presents complex structures in clear visualisations. This strengthens UBO verification and speeds up due diligence when ownership becomes complex.

T-rank helps organisations understand who ultimately owns and controls a business. The platform supports AML and KYC teams by calculating direct and indirect ownership and voting power, and by turning complex ownership structures into clear visualisations. Powered by UC's proprietary cross Nordic data, compliance teams gain access to deeper coverage, stronger traceability, and reliable supporting evidence for ownership verification.

Ownership and control are often buried in long chains of companies, making it difficult to verify the ultimate beneficial owner. The process is often slow, manual, and difficult to document. By combining UC's data with T-rank's software, the solution enables a more structured and scalable approach with greater transparency and traceability across onboarding and ongoing monitoring.

HELPING CUSTOMERS MEET NEW EU AML REQUIREMENTS

With the EU Anti Money Laundering Regulation increasing the burden of proof for UBO verification, access to independent data sources and clear documentation becomes more important for both onboarding and ongoing monitoring.

"Our customers have been clear. Calculated beneficial ownership is a critical capability, and today it often requires significant time and resources. With AMLR raising the bar for UBO verification, customers need both stronger proof and a faster process. By combining UC's proprietary cross Nordic ownership and company data with T-rank's ownership analytics, we deliver calculated beneficial owners and clear ownership visualisations that help compliance teams reduce manual work, document decisions with greater confidence, and shorten onboarding and CDD," says Peter Stier, Commercial Product Owner at UC.

The first services will launch in mid-April 2026 in UC Insight, giving Swedish compliance teams access to a calculated beneficial owner list and a clear ownership structure view designed to make ownership checks faster and easier to evidence.

"We are excited to work with UC to make advanced ownership calculations and visualisation easily accessible for Swedish compliance teams. By turning complex ownership chains into clear and transparent results, we help organisations identify who ultimately owns and

controls a company faster, and document their decisions with greater confidence," says Arne Petter Omholt, CEO of T-rank.

ABOUT UC:

UC is Sweden's leading provider of digital business and consumer information services. Since 1977, UC has enabled everyday and critical decisions to be based on reliable data, supporting both individuals and businesses across financial, sales, and marketing processes.

ABOUT T-RANK:

T-rank provides ownership analytics that help organisations identify who ultimately owns and controls a business. Its solutions support AML and KYC teams by calculating ownership and voting power and visualising complex structures in a clear and actionable way.

ABOUT LYVIA GROUP:

Lyvia Group is a European serial acquirer and long-term owner of software and digital solutions companies. Our companies build proprietary software, distribute third-party software and deliver digital solutions that support business-critical functions. Together, they operate across the digital value chain, from implementation and integration to operations and ongoing development.
