Genexis launches new Active Ethernet 10G FiberTwist models: premium performance, made simple

Genexis, the European leader in innovative fiber broadband solutions, is proud to announce the launch of two new 10G Active Ethernet (AE)/ Point-to-Point (PtP) Network Terminals (NTs). The two new single-port NTs, FiberTwist PX2110 and FiberTwist PX2120, come in the popular FiberTwist form factor for easy and effortless do-it-yourself (DIY) upgrades by households and run on Genexis' award-winning IOWRT software. Designed for network operators and Internet Service Providers (ISPs) serving premium residential and business markets, these new models offer high-speed fiber connectivity with a focus on simplicity, scalability, and cost-efficiency.

Why this matters for network operators and Internet Service Providers (ISPs)

As the demand for multi-gigabit bandwidth continues to grow, so is the need for 10G AE/PtP NTs that are easy to install and easy to use. The FiberTwist PX2110 offers a single 10GE LAN-port, while the FiberTwist PX2120 also has support for CATV. This allows operators to modernize networks without losing TV subscription revenues, and consumer trust. Both models are fully optimized for next-gen gigabit services and seamlessly integrate into existing infrastructures.

Key benefits for network operators and ISPs

- **Resource-efficient DIY upgrades** – With the popular FiberTwist design, upgrading is as simple as a twist – no truck rolls required, substantially reducing time and cost.
- **Easy to manage and provision** - Built on IOWRT software with management capabilities, giving operators control, diagnostics, and provisioning tools for streamlined operations.
- **Cost-effective scaling** – The 10G one-port NTs enable premium performance to more segments

- **Preserve existing sources of revenue** – With support for existing CATV subscriptions, the new PX-Series is built to last in diverse network deployments.

Maintaining leadership in Active Ethernet innovation

“As the market for multi-gigabit speeds accelerates, we want to enable 10G Active Ethernet for more subscriber segments. Our new FiberTwist PX-Series answers the need for affordable, easy-to-install 10G Network Terminals that support both fiber and cable networks. This is about giving operators what they need to stay ahead – and keeping their customers happy,” says Reinier Kramer, COO and Head of BU FTTH at Genexis.

With this launch, Genexis strengthens its position as the AE / PtP CPE market leader, delivering on its promise to offer high-performance fiber solutions that are both accessible and future-proof. It is yet a step forward in enabling premium connectivity to everyone’s home.

About Genexis

Genexis brings the world to everyone’s home. We enable people to participate in the digital society and access essential services and applications. Fast and user-friendly digital connectivity improves people's quality of life and positively impacts their world. By creating innovative, more sustainable, and intuitive products, we make it easy for homes to connect to the world.

Genexis is a leading European vendor of innovative broadband solutions for the home. Our customers are network operators, internet service providers, and fiber network installers. Genexis’ portfolio consists of ONTs, residential gateways, extenders, open-source-based operating systems, and communication management software. We are a European company headquartered in Stockholm (SE) and Eindhoven (NL). Genexis has a Sustainability Linked Bond listed on Nasdaq Stockholm and has earned the EcoVadis Gold medal for sustainability.
