

evroc and Detecon partner to operationalize sovereign AI and cloud for European organizations

- Combines evroc's sovereign high-performance cloud and AI platform with Detecon's enterprise transformation expertise
- Gives European organizations a credible path from AI ambition to live deployment, without ceding control to non-European cloud providers

evroc, The European Cloud, and Detecon, a technology and management consultancy part of the Deutsche Telekom Group, today announced a partnership with a straightforward proposition: **European enterprises should not have to choose between world-class AI capability and full control over their own data and infrastructure.**

Until now, organisations have faced a fundamental trade-off: accept dependence on foreign-controlled cloud infrastructure, or prioritize sovereignty and sacrifice access to cutting-edge AI capabilities. This partnership is built to close that gap.

evroc provides the foundation: high-performance compute, GPU capability, and cloud infrastructure operating entirely under European jurisdiction, alongside its enterprise AI agent roc and AI platform evroc Think. Detecon provides the enterprise layer: turning sovereignty strategy and regulatory requirements into working operating models, transformation programs, and deployed AI platforms. Together, they take an organization from ambition to production.

"Digital sovereignty has become a strategic business priority that goes far beyond regulatory compliance," said **Dr. Stefan Schnitter**, Managing Partner at Detecon. "Our clients need to translate jurisdictional requirements, AI ambition, and regulatory complexity into real architectural and operating model decisions. Together with partners like evroc, we can help organisations design and implement future-state platforms built on sovereign European foundations."

James Collis, VP Partnerships at evroc, added: "For too long, European organisations have had to choose between accessing best-in-class AI and cloud capabilities and maintaining full control over their data and compliance obligations. That trade-off shouldn't exist. evroc is built to eliminate it, and through our partnership with Detecon, we can now help organisations move from strategy to live deployment, on infrastructure that is fully under European control."

Demand for sovereign cloud and AI infrastructure has accelerated across Europe as organizations in sensitive sectors and mission-critical environments face tightening data regulations and growing concerns about dependence on non-European technology providers.

About evroc

evroc is The European Cloud, a sovereign cloud and AI services company committed to strengthening Europe's digital capability, independence and security. Launched in 2025, evroc is building Europe's truly sovereign cloud platform for the AI era, combining modern cloud performance with operational resilience, data residency in Europe, and complete platform and software control. The platform supports scalable deployment of AI workloads and is designed for mission-critical environments and organisations that require the highest standards of security and compliance, including public authorities, defence organisations and operators of essential services.

Headquartered in Stockholm, evroc operates entirely within Europe and is built from the ground up to meet European regulatory and data sovereignty requirements. It is fully European-owned and controlled, with zero dependencies on externally controlled software. evroc operates active cloud regions with redundant data centres and AI infrastructure in Stockholm, Paris and Frankfurt, supported by development teams across Sweden, France and the United Kingdom.

Backed by leading European investors including EQT Ventures, Norrsken VC, Giant Ventures and blisce, evroc's mission is to build a competitive, independent cloud platform that strengthens Europe's digital resilience, innovation capacity and long-term technological capability.
