

Heimdal Launches New Podcast: The MSP Security Playbook

COPENHAGEN, Denmark, May 21, 2025 - Heimdal Security launches a new podcast, **The MSP Security Playbook** - a show for managed service providers ready to scale smarter, boost profitability, and lead with next-gen cybersecurity solutions.

The first episode features **Nigel Moore**, founder of *The Tech Tribe*, who discusses how MSPs can move beyond reactive IT support models and embrace more consultative, future-focused roles.

“What got you to where you are now won’t get you where you want to go next. You’ve got to blow the whole lot up and reinvent your MSP from the ground up,” Moore says.

Also featured is a *Threat Briefing* from **Adam Pilton**, cybersecurity advisor at Heimdal and former UK Cyber Detective. Pilton outlines urgent risks tied to legacy router vulnerabilities and offers practical steps MSPs can take to enhance client security.

The podcast is hosted by **Jacob Hazelbaker**, Business Development Representative at Heimdal, who brings a field-level perspective to the discussions.

Each episode of *The MSP Security Playbook* highlights real-world strategies, expert insights, and actionable advice to help MSPs streamline operations and stay competitive.
