

## Catator joins SOFF, the Swedish Security and Defence Industry Association

Catator has been accepted as a member of SOFF, a industry organization representing companies active within the security and defense sector in Sweden. The membership reflects Catator's continued expansion within defence applications, where demand for efficient and decentralized energy solutions is increasing.

SOFF brings together 400 companies across a wide range of security and defense-related fields, serving as a platform for collaboration, innovation and dialogue between industry, authorities and international partners. The organization also collaborates with corresponding associations in other countries and is a member of the AeroSpace and Defence Industries Association of Europe (ASD) and the NATO Industrial Advisory Group (NIAG), providing access to international networks and market dialogue.

This supports Catator's continued focus on developing and commercializing its catalytic technologies for defense-related applications.

"Joining SOFF strengthens our ability to engage with key stakeholders across the defense sector and to contribute where we see a clear and growing need for efficient, compact and low-signature energy solutions. This is an area where our technology is well aligned with emerging operational requirements," says Tarras Delin, CEO of Catator.

Modern defense operations place increasing demands on reliable and decentralized power generation. Catator's catalytic technologies enable efficient fuel reforming and energy conversion close to the point of use, supporting improved operational flexibility and resilience.

"Catator broadens SOFF's expertise in the energy field through its perspectives and experience. We look forward to benefiting from their insights in the association's work to develop a stronger and more relevant Swedish defense market," says Robert Limmergård, Secretary General of SOFF.

**Disclaimer:** This press release contains statements about future events and expectations that are forward-looking and subject to risks and uncertainties.

Through its membership, Catator will engage with industry stakeholders, contribute to ongoing discussions on defense-related energy solutions, and further strengthen its position within the sector.

**About Catator**

Catator, headquartered in Lund, Sweden, is a leading technology development and integration partner for hydrogen and fuel cell technologies. Since its founding in 1990, Catator has been at the forefront of hydrogen catalysis, developing proprietary catalytic technologies for hydrogen production and fuel processing. The company's solutions enable efficient, compact, and low-emission fuel reforming across its three priority segments: Defense, Marine, and Data Centres.
