

Sistematica Available to Tele Radio Customers

Gothenburg, January 20th, 2025

Last year Italy-based Sistematica was acquired by Allgon Group, which represented a big step for the company towards offering new remote-control possibilities to customers around the globe. Now in 2025, to further provide remote technology solutions, Sistematica has made its products available through Tele Radio's global network of 25+ vendors. Making Allgon's goal of expanding the suite of products available globally a reality.

Sistematica brings both wireless and wired options to provide the most complete options for any application, a feature particularly useful for highly mobile applications. These wired options can be tailored to any specific needs, with the possibility of adding an emergency button, custom button position, and displays; all of which are able to provide life feedback.

Mark van der Elst, Chief Market Officer at Allgon AB said "It's great step forward for everyone already familiar with the advantages of wireless remote controls. The acquisition of Sistematica introduces to customers even more advanced technology, alongside an already elaborate product range."

Tele Radio's reach paired with Sistematica's flexibility is a match that compliments each brand's product line and philosophy. With features unique to Sistematica, such as button equipped receivers, giving operators another layer of redundancy and transmitters being able to float. Both features designed to prevent operational failure due to missing transmitters.

This philosophy of providing options to users to maintain operations is also seen in Sistematica's smartphone app. Simplifying maintenance operations and providing an emergency option to use your smartphone as a transmitter in case of failure. The mix of modern technologies and a safety-focused feature design fits Tele Radio's ethos of safe and smart operation.

The cooperation between these two Allgon brands marks a new and exciting time for the group. It consolidates the mission of bringing solutions to answer the demands users have as the technologies have evolved. Any organization looking to use Sistematica's remote-control solutions can now get in touch with their local Tele Radio subsidiary to get a tailored experience to fit their needs in the best possible way.

Information for the editors, not for publication

Allgon is a world-leading player in industrial radio control. We develop, manufacture, and deliver solutions in industrial radio control to customers around the world.

At Allgon, we have a long history of working with wireless communication. In recent years, we have focused our activities on the market for industrial radio control, where we are among the five largest players globally. Industrial radio control is used within a wide range of application areas in industrial production as well as in the construction and transport sectors. Our solutions often have a central and business-critical role in our customers' production and the safety of their employees. Industrial radio control helps to streamline the customers' business.

The majority of Allgon's turnover is in radio remote control systems through our brands Tele Radio and Åkerströms.
