# DRIVE versions of the Volvo S60 and V60 - CO<sub>2</sub> emissions of 114 and 119 g/km

## **DRIVE versions of the Volvo S60 and V60 - CO<sub>2</sub> emissions of 114 and 119 g/km**

The eco-conscious Volvo customer can now buy Volvo S60 or V60 in a particularly economical DRIVE version, with CO<sub>2</sub> emissions of just 114 g/km and 119 g/km respectively - corresponding to fuel consumption of 4.3 and 4.5 l/100 km respectively.

This means that Volvo buyers can now choose between a total of seven models with CO<sub>2</sub> emissions below 120 g/km, three of them below the 100 g/km mark.

The Volvo S60 and V60 are now available with the upgraded 1.6-litre diesel engine that meets the Euro 5 emission standard introduced in January 2011. This further-developed engine in combination with a six-speed manual gearbox and start/stop function has made it possible for Volvo's engine experts to keep CO<sub>2</sub> emissions down to 114 g/km in the S60 and 119 g/km in the V60.

Volvo's DRIVE badge sits on those models that offer the best environmental performance in their size segments. The upgraded engine is already found in the DRIVE versions of the Volvo C30, S40 and V50, all with CO<sub>2</sub> emissions of 99 g/km. In spring 2011 the Volvo V70 DRIVE (119 g) and Volvo S80 DRIVE (119 g) will also become available with the further-enhanced Euro 5 diesel engine.

### **Successful hunt for increased efficiency**

"We have moved ahead very quickly since we launched our first three 119 gram models in Paris in autumn 2008. The fact that we now have seven models below 120 g/km, three of them below 100 grams, emphasises that few of our competitors can match us in the drive for increasingly eco-efficient cars," says Volvo Cars President and CEO Stefan Jacoby.
