Volvo S90 - model year 2017

The S90 is Volvo's new premium 4-door, 5-seat flagship sedan. It is built on the new [Scalable Product Architecture \(SPA\)](#), Volvo's advanced modular product platform that will underpin all new Volvo cars in the 90 and 60 Series.

Like its siblings XC90 and V90, the S90 carries the proud and confident face of Volvo's new design language, along with classic Volvo styling cues. Key features include the iconic "Thor's Hammer" LED headlight design, the new grille and Volvo Iron Mark, and the expressive use of the Volvo word mark on the rear.

The Scalable Product Architecture allows for a newly-developed chassis to be used with the S90. When combined with multiple electronically-controlled driving modes that can adjust steering feel, throttle and transmission response, and ride height, the S90 provides drivers with a relaxed confidence across a variety of conditions.

In the cabin, Volvo has taken cues from the success of its XC90 model and raised the bar with new details on the dashboard and instrument panel, including new air blades that stand vertically on each side of the Sensus user interface. Imagine as a Swedish sanctuary.

Connectivity

All new Volvos are now connected, thanks to Volvo's connectivity offering called Sensus. It delivers an intuitive touch screen interface that combines car functions, navigation, connected services and in-car entertainment applications such as Spotify, Pandora, or TuneIn. The portrait-oriented touch screen enables easy and fast access to a host of functions and features. [See our Sensus factsheet for more details.](#)

Powertrain technology

The S90 is powered by Volvo's [Drive-E powertrains](#), including Volvo's T8 Twin Engine, a plug-in hybrid mated to an 8-speed automatic transmission.

The S90 T8 offers a combined 400 horsepower by way of a two-liter turbocharged and supercharged gas engine in front and an electric motor at the rear. Together they deliver an EPA-rated 53 MPGe.

Safety and semi-autonomous drive

Volvo's leadership in the field of automotive safety is confirmed in the S90. Volvo's City Safety Technology, standard on all Volvo models, combines automatic braking functionality and collision avoidance systems to cover a range of potential accident scenarios and help keep you safe.

City Safety's functionality is further extended in the S90 with Large Animal Detection, designed to help avoid or mitigate collisions with large animals such as moose. An auto-steer functionality which helps to keep you on the road, called Run Off Road Mitigation, has also been added.

Volvo's overall safety offering, called IntelliSafe, encompasses both active and passive safety systems and forms the groundwork for Volvo's leadership in the field of autonomous drive. The S90 already offers semi-autonomous drive with Pilot Assist, which works up to 80 mph on clearly marked roads. Pilot Assist is another step towards Volvo's Vision 2020, which states that no one should be killed or seriously injured in a new Volvo by 2020.
