

## Conapto and CUDO Sign Multi-Year Deal to Power SingularityNET's AI Expansion

*Partnership will support high-density GPU deployments with 100% renewable energy*

**Stockholm, Sweden – 30 September 2025** – Conapto, a leading provider of sustainable, high-density data center solutions, today announced a multi-year hosting agreement with CUDO Compute, a global cloud platform specializing in decentralized, high-performance infrastructure.

Under the agreement, CUDO will deploy next-generation GPUs—including NVIDIA H200 and L40S—at Conapto’s Stockholm facilities, which are powered by renewable energy and built for advanced AI workloads. The partnership enables fast, low-latency deployment of GPU capacity for inference, supporting the growing global demand for scalable, energy-efficient infrastructure.

“We’re excited to partner with CUDO to deliver the infrastructure backbone needed for the next generation of AI applications,” said **Stefan Nilsson**, CCO of Conapto. “Our facilities are optimized for high-density compute environments and powered by 100% renewable energy, making us a natural fit for supporting both performance and sustainability goals.”

The collaboration will provide flexible, enterprise-grade hosting to meet the increasing demands of AI applications. With the integration of high-performance GPUs, such as the H200 and L40S, CUDO enables faster, more efficient inference capabilities across industries, delivering real-time performance without compromising on environmental responsibility.

“Our partnership with Conapto is crucial as we bring high-performance AI infrastructure to

PRESS RELEASE 2025-09-30

market,” said **Matt Hawkins, CEO of CUDO**. “Their focus on sustainability and operational excellence aligns perfectly with our mission to deliver efficient, accessible, and environmentally responsible compute resources.”

The Conapto-CUDO agreement reflects a shared commitment to innovation, sustainability, and infrastructure models that are redefining how AI is built, deployed, and scaled.

### **About Conapto**

Conapto is a Swedish data center provider specializing in sustainable, high-density, and secure colocation services. With a focus on 100% renewable energy, energy efficiency, and heat reuse to district heating, Conapto offers a modern, compliant infrastructure platform for enterprise and cloud workloads.

### **CUDO Compute**

CUDO Compute, founded and headquartered in the UK, specialises in designing, building, and managing AI infrastructure, including large-scale GPU clusters for training and inference. An NVIDIA Cloud Partner (NCP), CUDO combines 20+ years’ datacentre and cloud expertise with 24/7 full-stack engineering and enterprise service, delivering sustainable, next-generation AI factories that integrate infrastructure, operations, and financing to accelerate enterprise AI adoption globally.
