

Monsson Accelerates Swedish Expansion with New 20 MWh BESS Project in HÄrryda

Stockholm, August 14, 2025

Three months after its first Battery Energy Storage System (BESS) acquisition in Sweden, Monsson has secured a second project—a 20 MWh facility in HÄrryda, western Sweden.

Scheduled for construction in the fall of 2025, the facility will consist of two of Monsson’s signature 10 MWh battery units, optimized for cold-weather performance and reliable operation in Nordic conditions, utilizing an enclosed warehouse solution.

Monsson acquired the project from Fu-Gen, a Nordic developer with a proven development history, including recent divestments totaling over 100 MW of BESS projects in Sweden and Finland. Monsson will serve as EPC (Engineering, Procurement, and Construction) provider and retain full ownership and operational responsibility.

“Our investment in HÄrryda reinforces Monsson’s commitment to building a robust portfolio of flexible storage assets across Sweden,” said Sebastian Enache, Head of M&A at Monsson Group. “To support our expansion strategy, we will also launch commercial and technical BESS training sessions in Stockholm this fall, aimed at helping the local industry gain deeper insight into how storage can enhance grid stability, unlock profitability, and accelerate the adoption of next-generation technologies.”

With ongoing initiatives in Germany, Finland, Italy, and Croatia, Monsson is targeting more than 1 GWh of energy storage across Europe, over 200 MWh of which is planned for Sweden.

“Several additional Swedish projects are nearing announcement,” concluded Joanna Lillequist, CEO of Monsson Energy AB. “Our focus remains on identifying scalable storage opportunities and delivering them through Monsson’s climate-adapted BESS platform and integrated delivery model.”

About Monsson

Monsson has been active in the European renewable energy sector for over 20 years. With a portfolio exceeding 6 GW across wind, solar, and battery storage, the company provides turnkey solutions for the development, construction, and operation of renewable energy projects, including advanced energy storage systems.
