

Evallic expands into SATCOM and welcomes Requtech

Evallic is pleased to announce an investment in Requtech AB, a Swedish technology company at the forefront of satellite communication systems for defense, government, and critical infrastructure. Through the investment, Evallic enters the fast-growing market of satellite communications (SatCom).

Founded in 2009, Requtech has established itself as a pioneer in advanced SatCom solutions. Requtech's electronically scanned phased array (RESA) terminals — certified by leading satellite operators such as Intelsat — are uniquely positioned to meet the growing demand for fast, reliable, and secure connectivity across land, sea, and air.

Through Requtech, Evallic enters the rapidly evolving and fast-growing SatCom market. A market that is crucial to enable secure communication within defense, government and critical infrastructure. Requtech will continue to operate under its established brand, driving innovation and serving its global customer base — now with the backing and scale of the Evallic group

"Requtech has an outstanding track record of developing leading SatCom solutions, well suited for the needs of its demanding customers," said Hampus Nestius at Evallic. "Its latest addition of the RESA terminals demonstrate remarkable innovation, allowing defense, government and critical infrastructure customers to have reliable and secure satellite connectivity on the move. The addition of Requtech strengthens our collective capabilities and opens new opportunities for innovation."

Dr. Omid Sotoudeh, Founder and CEO of Requtech AB, added: "Partnering with Evallic marks a transformative moment for Requtech. We've long been committed to revolutionize global communication capabilities, and this collaboration enables us to scale our impact significantly. Evallic's cutting-edge platform and strategic direction offer the perfect foundation for us to drive forward technological breakthroughs and broaden our influence across international defense and security sectors."

The investment in Requtech emphasizes Evallic's commitment to unite and strengthen leaders and entrepreneurs within the defense technology industry, to power the protection of society.

The transaction was signed in August and remains subject to applicable regulatory approvals. Financial terms of the transaction were not disclosed.

About Requtech

Requtech is a Swedish technology company at the forefront of satellite communications, delivering advanced systems for defense, government, and critical infrastructure. With its product portfolio, Requtech enables uninterrupted, high-speed connectivity across land, sea, and air. The company's RESA terminals are certified by leading satellite operators and uniquely positioned to meet the demands of multi-orbit, multi-band networks and allow the users to have secure communication on the move. From secure battlefield communications to emergency response and environmental monitoring, Requtech empowers mission-critical operations with scalable, resilient, and future-ready technology. For more information, please visit www.requtech.com.

About Evallic

Evallic is home to leading European defense technology companies, dedicated to protecting society through advanced, mission-critical solutions. With customers in over 30 countries and operational deployments across more than 95% of NATO member states, Evallic delivers cutting-edge systems that enhance situational awareness, decision-making, and operational effectiveness. The group brings together leading technology providers across defense, security, and intelligence domains, fostering innovation and collaboration to meet the challenges of modern conflict and global security. Evallic is committed to building a safer future through scalable, interoperable, and resilient technologies. For more information, please visit www.evallic.com.
