

Surfboard Payments Now Offers Tap to Pay on iPhone for Customers in Norway to Accept Contactless Payments

An easy, secure and private way to accept contactless payments with only an iPhone and the CheckoutX iOS app, no additional hardware needed

Norway — September 23, 2025 — Today, Surfboard Payments, the provider of innovative cloud-based payment solutions, now enables its customers in Norway to seamlessly and securely accept all forms of in-person contactless payments with Tap to Pay on iPhone, including contactless credit and debit cards, Apple Pay, and other digital wallets, using only an iPhone and the CheckoutX app — no additional hardware or payment terminal needed.

Using Tap to Pay on iPhone is easy, secure and private. At checkout, the merchant will simply prompt the customer to hold their contactless payment method near the merchant's iPhone, and the payment will be securely completed using NFC technology. Tap to Pay on iPhone also supports PIN entry, which includes accessibility options.

Apple's Tap to Pay on iPhone technology uses the built-in features of iPhone to keep business and customer data private and secure. When a payment is processed, Apple doesn't store card numbers or transaction information on Apple servers, so merchants and customers can rest assured that their data stays theirs.*

For our partners, the integration offers a straightforward way to embed contactless payment acceptance into their own solutions. By connecting through Surfboard Payments, software providers can easily extend this capability to their merchant networks without added complexity. For merchants, this means they can start accepting payments within minutes by downloading the CheckoutX app on their iPhone, giving their customers a smoother and faster checkout experience in any setting, from retail stores to cafés and events.

Kugesh Rajasekaran, System Architect at Surfboard Payments, stated: *"Our partner-first approach makes it simple for ISVs to integrate secure and modern payment acceptance. In Norway, this also means full support for BankAxept, which is essential for both merchants and consumers. This enables partners to scale adoption with ease, while businesses of every size can deliver a seamless and trusted payment experience directly on iPhone."*

Tap to Pay on iPhone enables Surfboard Payments customers to use a contactless payment acceptance solution that is easy to set up and use. Merchants using an iPhone XS or later, running the latest version of iOS, can start accepting contactless payments with Tap to Pay on iPhone within minutes through the CheckoutX app from the Apple App Store.
