PRESS RELEASE

Ework and System Verification sign framework agreement

Since several years back, Ework has had a strategic cooperation with System Verification to develop their new digital platform. The parties are now signing a three-year framework agreement, including quality assurance, operations and development. The goal is a development process that takes advantage of cloud services and AI to quickly improve the platform based on customer feedback.

The new digital reality requires a high degree of flexibility and users of digital services and products expect fast feedback and continuous improvements. At the same speed as digital development, the so-called gig economy grows rapidly, which means that effective digital meeting points for companies and consultants must be created. In the light of this, Ework is now signing a framework agreement with IT-consultants firm System Verification for continuous development of their internal systems.

"Our digital platform must be adapted to the new gig economy landscape and be built so that the process from customer feedback to implementation of improvements and release runs fast. Customer feedback management and an efficient quality pipeline are critical. System Verification has the right knowledge, partners and attitude to support this work," says Jesper Vraa Henriksen, CDO at Ework Group and continues:

"Also, we greatly value that an external partner like System Verification challenges and quality assures our internal development organization. Together, we become better and stronger," he says.

To achieve the project goals data-driven development is in focus. The new development process uses AI to monitor the software and an automated pipeline management. This increases the delivery rate, strengthens security and gives the users a better experience.

Ework Group is a market leading, independent consultant supplier in Northern Europe with focus on IT, telecom, technology and business development. Without employed consultants, Ework can impartially match every assignment with the right consultant from the whole market. Founded in Sweden in 2000, Ework today operates in Sweden, Denmark, Norway, Finland and Poland. The company has frame agreements with more than 170 leading companies in most industries, while managing 9,500 consultants on assignment. The head office is in Stockholm, Sweden. Ework's shares are listed on NASDAQ OMX Stockholm.

"This is an exciting project where we are given the opportunity to show how modern development processes and quality assurance methods work, and the value that our ecosystem provides," says Henrik Sällman, CEO at System Verification Bosnia-Herzegovina.

Approximately forty employees from System Verification, Reeinvent and Ework, as well as other partners, are working with the new digital platform in Sweden, Poland and Bosnia-Herzegovina. The new framework agreement was signed in late February and will run for three years.
