

Elekta announces strategic partnership with the Centre hospitalier de l'Université de Montréal

Cancer treatment equipment and oncology information system to increase efficiency and standard of treatment

MONTREAL, Canada, May 7 – Elekta has signed an agreement to provide the Centre hospitalier de l'Université de Montréal* (CHUM) with advanced linear accelerators and software. The order, resulting from a competitive tender process, is valued at more than USD 20 million and was booked during Elekta's fourth quarter of its fiscal year 2013/14.

The CHUM was formed through the merger of three teaching hospitals, including the 372-year old Hôtel-Dieu Hospital. It is one of the largest hospitals in Canada and a leading academic center in the province of Quebec. To increase the efficiency of its new integrated cancer center, the CHUM has chosen Elekta's [MOSAIQ®](#) oncology information system to manage the complete spectrum of oncology treatments in a single patient record accessible by its 17 multi-disciplinary teams across multiple locations.

The partnership agreement also includes [Elekta Infinity™](#) linear accelerators with [Agility™](#) multileaf collimators. At the core of a new radiotherapy treatment platform, this sophisticated technology will offer CHUM's clinicians superior dose conformance and treatment speed as well as high-resolution beam shaping. For patients, it means safer, faster treatment with less risk of damage to healthy tissue.

Dr. David Roberge, Head of Radiation Oncology at CHUM, says: "We chose Elekta, not simply for the advanced capabilities of its linear accelerators, but because of our shared vision for improving cancer management. Together, we will better integrate our cancer care activities — whether it be clinical research, screening, surgery, systemic therapy, radiation, survivorship or palliative care. MOSAIQ will ensure that patients have the most efficient management options available."

Jay Hoey, Executive Vice President of Region North America, says: "This is another example of how Elekta is aligning with comprehensive cancer programs to lead the future of cancer care together. We hope to establish MOSAIQ as the primary electronic medical record solution for cancer care across the province, thereby enhancing the experience for cancer patients and providers."

Michael Power, Vice President and Managing Partner for Elekta Canada, says: "Elekta is already well positioned in Quebec, and with this strategically important partnership, our commitment to the region will be even stronger."
