

Elekta highlights leading R&D program and reiterates financial ambitions

SAN ANTONIO, USA, October 19, 2015 – At a Capital Markets Presentation during the American Society for Radiation Oncology (ASTRO) Annual Meeting, Elekta updated investors on the state of the business with special attention on its innovations and product portfolio.

COO Johan Sedihh said that the comprehensive action program launched earlier this fiscal year is on track; he reiterated the plan to reduce costs by SEK 450 million, as well as the ambition to improve EBITA margin with 6 percentage points by fiscal year 2017/18.

Chief Commercial Officer Ian Alexander gave an update by region and reiterated the expected mid-term market growth rate of 3-5 percent per year.

Dr. Beth Erickson from The Froedtert & Medical College of Wisconsin, a member of Elekta's Atlantic (MR Linac) research consortium, said: "Radiation oncologists need to be able to see what they are doing in order to answer such questions as: Is the treatment working and can we know that before the treatment is complete? The MR linear accelerator will give oncologists this insight while avoiding normal tissue that can suffer collateral damage from radiation."

Dr. Erickson added that Atlantic promises to take the next important paradigm-changing step in enabling oncologists to see what they are treating at the time of treatment, even including tumors in motion.

Kevin Brown, Global Vice President Scientific Research, confirmed that the Atlantic project is on schedule and that Elekta plans to commercially launch the innovative technology in 2017 and expects to take orders of 75 systems until 2019.

Todd Powell, Executive Vice President Comprehensive Oncology Solutions, explained how synergies in Elekta's portfolio development will drive efficiency and competitiveness. He added: "Through our development of Atlantic, we will enhance our imaging capabilities and integrated workflow as well as our treatment planning capabilities for users of our current solutions within the rest of our installed base."

Veronica Byfield Sköld, Vice President Product Commercialization, presented Leksell Gamma Knife® Icon™, the world's most sophisticated system for brain radiosurgery. "With Leksell Gamma Knife Icon, clinicians can choose either frame-based or frameless methods to immobilize the patient's head, as well as the option to perform the treatment in a single session or in multiple sessions." Elekta announced on October 12 that the system has been acquired by seven leading health care centers in the US.
