

## Technetics Group – a new name for well proven brands, showcases at ONS 2012

Technetics Group will be a new name exhibiting at ONS 2012, but visitors familiar with its world leading brand names will recognize its heritage. Formed in August 2011, Technetics Group is an EnPro Industries company that was formed to combine its high performance seals group, Garlock HPS, with newly acquired Tara Technologies.

Producing engineered seals, components, assemblies and sub-systems for demanding environments, Technetics Group brands, such as HELICOFLEX®, are well proven and have served the Oil and Gas sector for over 50 years. A trusted supplier relationship exists with approvals in place from leading manufacturers and OEMs.

Gilles Hudon, President of Technetics Group, commented, "The combination of Garlock HPS and Tara creates highly desirable capabilities that enable us to offer complete solutions to our customers, including the manufacture of precision components, the assembly of components into finished products, and the integration of these assemblies into our customers' systems.

"In addition, our group now has expertise in the technology required to create and apply highly sophisticated surface coatings that allow our products to operate in demanding environments. We are very pleased with this combination, and we look forward to the benefits it will afford our customers."

Technetics Group brands include HELICOFLEX® Metal Seals, FELTMETAL® Abradable Seals and Acoustic media, CEFIL'AIR® Inflatable Seals, BELFAB® Bellows & Accumulators and ORIGRAF® Graphite Seals. A wide range of products will be on display during ONS 2012 or further details can be quickly accessed on the new Technetics Group website at [www.techneticsgroup.com](http://www.techneticsgroup.com).
