Stallion Opens Super-Yard in the Eagle Ford Shale

KENEDY, TX — On Monday, July 11, 2012, customers in South Texas joined Stallion Oilfield Holdings, Inc. in celebrating an open house at the Company's newest facility. The new 50-acre facility in Kenedy is one of several facilities in South Texas, namely Carrizo Springs, Tilden, Victoria and Alice, designed to support the Eagle Ford Shale activity for years to come. Stallion provides the same, dependable services as at all of its South Texas locations including wellsite accommodations, wellsite construction, waterline services, production fluid logistics services, frac tank rental and wellsite communications. The new facility is also home to an 80-person camp used to provide onsite accommodations for the Company's service personnel. Stallion currently has over 60 locations strategically located in the major oil & natural gas basins across the United States.

Attendees were given a tour of the new facility and learned about the quality service Stallion will continue to provide in the area. Stallion's sales & marketing team fielded questions and provided insight into the Company's newest locations and discussed how Stallion is working with oil and gas operators and other service companies to provide efficient and reliable services that meet the most stringent safety requirements. With the return of major integrated and international oil companies to the U.S. land oil and gas sector, not only in the Eagle Ford Shale of South Texas but also across the country, more operators are looking to Stallion to provide a comprehensive set of wellsite and production services delivered by well-trained and safety-conscious service technicians. Stallion is committed to meeting this challenge.

Stallion Oilfield Holdings, Inc. and its subsidiaries provide a wide range of wellsite support, completion, production and logistics services to oil and gas exploration and production companies, drilling contractors, and other service companies throughout the United States. The Company's comprehensive suite of services includes workforce accommodations, production and fluid logistics services, surface equipment rental, wellsite construction, solids control services, and wellsite communications. Stallion's operations cover the most active and prolific oil and natural gas basins in the U.S., including South Texas (Eagle Ford Shale), Rocky Mountain Regions (Niobrara/Bakken Shale/Piceance), Permian Basin (Wolfcamp/Avalon/Bone Spring Shales), the Mid-Continent (Mississippi Lime/Woodford Cana/Granite Wash), ArkLaTex (Haynesville Shale), Marcellus/Utica Shales, North Texas (Barnett Shale), the Gulf Coast (Tuscaloosa Marine Shale) including the inland waters of Louisiana, offshore Texas and Louisiana Gulf Coast, Prudhoe Bay (Alaska) and, to a lesser extent, certain international waters.
