

## **Press Release**

### **Aero-Dienst choose DinERP for Tablet based Work Order Applications to support digital transformation strategy**

MON, October 16, 2017 09:30 CET

**TRONDHEIM, NORWAY – Norwegian software vendor DinERP has signed a long-term contract to supply German business aviation leader Aero-Dienst with tablet-based Work Order applications in line with their digital transformation strategy.**

The DinERP Work Order application will be optimised for the use on tablets and will be used by employees for shop-floor Work Order administration. The application utilises the powerful Work Order components of IFS, and streamlines the workflow to perfectly align with the specific requirements of Aero-Dienst, whilst providing the staff with an intuitive tool to efficiently manage daily tasks.

The application will allow shop-floor users to manage all aspects of the maintenance process, end-to-end, from selection of aircraft to capturing of time and corrective actions.

Viktor Peters, Managing Director of Aero-Dienst commented "We have been impressed with DinERP's ability to understand our requirements and how we can optimise our efficiency through the digital transformation of key processes. IFS in combination with the new, visually-appealing and intuitive Work Order application from DinERP plays an important role to further enhance the service level we provide to our customers which is the very essence of Aero-Dienst".

Lars Morten Nygaard CEO of DinERP commented: "Aero-Dienst is an award-winning company at the very pinnacle of their industry and we are delighted to welcome them as a customer of DinERP. We are looking forward to helping them realise their digital transformation strategy through the provision of the Work Order application that will seamlessly integrate with their existing IFS Applications, whilst providing the perfect workflow for their specific business".

#### **About DinERP**

Norwegian software vendor DinERP helps customers save time and money by optimising their existing IFS Applications™ for non-expert users - often around 80% of the total workforce.

By placing the power of IFS Applications into the hands of as many end-users as possible, DinERP helps customers drive their digital transformation strategies from the bottom up, with minimal effort and maximum effect.
