Sensys Gatso Appoints Johan Norrman as Chief Technology Officer

The transportation technology leader brings extensive experience in AI, connected vehicle solutions, and technology transformation to help support the company's next phase of innovation and growth.

Sensys Gatso Group, a global leader in traffic safety solutions built on trusted innovation, today announced the appointment of Johan Norrman as Chief Technology Officer (CTO). Norrman will join the company's group management team and lead the company's global technology strategy, product development, information technology, and research and development initiatives.

Norrman brings more than 20 years of experience driving technology for organizations across the transportation, fleet management, medical technology, and industrial sectors. Most recently, he served as Chief Technology Officer for one of Europe's leading fleet management solution providers, where he led the development of integrated hardware and software platforms designed to improve vehicle safety, operational efficiency, and fleet performance.

His background includes the deployment of advanced AI-driven video technologies that help commercial fleet operators identify risky driving behaviors, improve traffic safety outcomes, and support accident investigations through intelligent video analytics. Throughout his career, Norrman has successfully guided organizations through major technology transformations, including cloud migration initiatives, software platform modernization, and the integration of hardware, software, and data-driven services.

"We are delighted to welcome Johan to Sensys Gatso," said Lew Miller, Sensys Gatso Group Chief Executive Officer. "His deep understanding of transportation technology and cyber security, combined with his proven ability to lead complex technology transformations, makes him an ideal addition to our leadership team. Johan's experience building technology organizations that successfully integrate hardware, software, AI, and cloud-based services will be instrumental as we continue delivering secure, reliable and innovative solutions that help our customers improve road safety and operational effectiveness. As we continue to evolve our solutions portfolio and expand our global impact on traffic safety, his expertise will help ensure we remain at the forefront of innovation while delivering the reliability and trust our customers depend on."

Norrman said Sensys Gatso's mission to improve road safety through technology was a key factor in his decision to join the company. *"Throughout my career, I have been motivated by opportunities to use technology to make different aspects of society safer, including transportation."* Norrman said. *"At its core, Sensys Gatso's mission is about protecting people and creating safer roads. That purpose, combined with the company's remarkable history of innovation and its global leadership position in traffic safety, made this a very compelling opportunity."* Norrman sees strong parallels between his previous work in fleet safety technologies and Sensys Gatso's traffic enforcement and traffic management solutions. *"Whether you are helping fleet operators improve driver safety or helping public agencies improve road safety, the underlying objective is the same—using technology to change behavior and reduce risk,"* he said. *"Modern transportation solutions increasingly depend on the seamless integration of advanced hardware, intelligent software, cloud platforms, and AI-driven analytics. Sensys Gatso has built a strong foundation in these areas, and I look forward to helping accelerate the next generation of innovative solutions for our customers."*

Sensys Gatso Group AB is a global leader in traffic safety solutions with employees and subsidiaries in Australia, Germany, the Netherlands, Saudi Arabia, Sweden and the USA, as well as a branch office in the United Arab Emirates. Shares are listed on Nasdaq Stockholm under the stock symbol SGG.

As CTO, Norrman will focus on strengthening Sensys Gatso's technology platforms, supporting the continued evolution of its on premises and cloud-based offerings, and helping the company maximize the value of its global engineering resources. Having previously led large-scale technology consolidation and modernization initiatives, he sees significant opportunities to further enhance efficiency, scalability, and innovation across the company's product portfolio. *"I have spent much of my career helping organizations transform from primarily hardware-focused businesses into providers of integrated technology solutions,"* Norrman said. *"Sensys Gatso is at an exciting point in that journey. By continuing to strengthen our hardware and software capabilities while leveraging data, cloud technologies, and AI, we can deliver even greater value to customers while supporting the company's long-term growth ambitions."*

Norrman also emphasized the importance of maintaining the company's commitment to Trusted Innovation—a core principle that has guided Sensys Gatso's reputation for more than seven decades. *"Traffic safety technologies are mission-critical systems that customers depend on every day,"* he said. *"Whether you are developing medical devices or traffic safety solutions, reliability is non-negotiable. Innovation is important, but it must be accompanied by rigorous validation, quality, and trust. Sensys Gatso's commitment to Trusted Innovation strongly resonates with me because it reflects exactly what customers expect from a technology partner—solutions that are innovative, reliable, and proven to perform."*

Norrman will join Sensys Gatso in August 2026.
