Nobia's new kitchen factory earns prestigious green building certification

The kitchen specialist Nobia's new kitchen factory in Jönköping, Sweden, receives the prestigious BREEAM Excellence sustainability certification, which imposes strict requirements and evaluates aspects such as energy efficiency, material selection, waste management, and working environment. The BREEAM-certification is a testimony to Nobia's long-term strategy in becoming a world leader in sustainable kitchen production.

– Our hard work toward sustainable kitchen production has been recognized by one of Europe's most trusted sustainability certification bodies for buildings. The advantage of a certification level this high is that it required us to integrate sustainability early in the factory building construction process, from design to completion, says Anna Hamnö Wickman, Sustainability Director at Nobia.

Nobia has built Europe's most modern kitchen factory in Jönköping, Sweden, using technology completely unique to the kitchen industry. The building is now certified according to the BREEAM Excellent environmental standard, which sets high demands and evaluates energy use, material choices, waste handling, and the work environment.

Before construction of the new factory began in 2020, several measures were taken to protect the ecological values of the surrounding area. Stormwater ponds were built, herbs and plants were relocated for future green spaces, and historically significant boulders were given a new home.

The energy consumption of the factory building is entirely sourced from renewable energy. The roof is equipped with 10,000 square meters of solar panels, with a total capacity of 2 MW.

Wood waste from the production is delivered to Jönköping Energi. In return, the factory receives district heating from certified renewable sources. Conditions for sustainable logistics have also contributed. A railway track leads directly into the factory and will enable Nobia to receive incoming raw materials and ship complete kitchens to customers via train.

For Nobia, sustainability through the entire kitchen lifecycle is in focus. This year, Nobia's Swedish kitchen brand Marbodal is moving into the new factory. The kitchen range is Nordic Swan eco-labelled.

Nobia develops, manufactures and sells kitchen solutions through a number of strong brands in Europe, including Magnet in the UK; HTH, Norema, Sigdal, Invita, Superfront and Marbodal in Scandinavia and Novart in Finland. Nobia generates profitability by combining economies of scale with attractive kitchen offerings. The Group has approximately 4,000 employees and net sales of about SEK 11 billion. The share is listed on Nasdaq Stockholm under the ticker NOBI.

Revolutionary technology minimizes harmful emissions and improves quality, extending the lifespan of the kitchens.

– Our investments in new production technology and the high sustainability performance of the factory enables us to manufacture kitchens with respect for the environment. Our new factory in Jönköping is a good example of how Swedish industry can contribute to the green transition, says Kristoffer Ljungfelt, CEO at Nobia.

Sustainability at Nobia

Nobia is determined to lead the way within sustainability in the kitchen market, and we are transitioning our entire operations to achieve our ambition. We systemically work on innovation and product development to deliver sustainable kitchens to our customers. We design kitchens with smart materials and solutions that contribute to a sustainable lifestyle for millions of people. Our climate action is guided by approved Science Based Targets, aligned with the 1.5-degree Celsius pathway. Since the base year 2016, we have already lowered the climate impact from our own operations by more than the target 72 per cent. We are now preparing for the next step in our climate journey.

About Nobia's new kitchen factory in Jönköping

Europe's most modern kitchen factory is currently being taken into operations in Jönköping, Sweden. The factory is completely unique for the kitchen industry and measures 123 000 square meters, equivalent to approximately 20 football fields. This is one of the largest factory construction projects in Sweden. The decision to build the Jönköping factory was made in 2019. With the latest technology on the market, Nobia gets a more flexible production that enables us to respond more quickly to customer needs and deliver sustainable kitchens. The factory is one of Nobia's key strategic initiatives and a long-term investment designed to benefit the Jönköping region, Sweden, and our customers for years to come.

Nobia develops, manufactures and sells kitchen solutions through a number of strong brands in Europe, including Magnet in the UK; HTH, Norema, Sigdal, Invita, Superfront and Marbodal in Scandinavia and Novart in Finland. Nobia generates profitability by combining economies of scale with attractive kitchen offerings. The Group has approximately 4,000 employees and net sales of about SEK 11 billion. The share is listed on Nasdaq Stockholm under the ticker NOBI.

About BREEAM

BREEAM (BRE Environmental Assessment Method) is a British environmental certification system for buildings, used as a tool to promote sustainable construction. For example, a building's energy use, indoor climate, water management, and waste handling are assessed and scored. The evaluation also includes the level of innovation, project management, the building's location in relation to public transport, choice of construction materials, and potential pollution caused by the building. BREEAM uses a points-based system where buildings are awarded a percentage score based on the criteria met. The rating levels are:

Unclassified: < 30%

Pass: ≥ 30%

Good: ≥ 45%

Very Good: ≥ 55%

Excellent: ≥ 70%

Outstanding: ≥ 85%
