Hansford Sensors prepares showcase for Maintenance Brussels

[Hansford Sensors](#) will be presenting a range of vibration monitoring solutions, including some new and enhanced equipment, at this year's [Maintenance Brussels](#). Also being offered is the chance for all visitors to win a vibration meter on the stand. The industrial trade show for maintenance engineers in production, processing and infrastructure environments takes place at the Brussels Expo, Belgium between 20th and 21st March, with the prize draw taking place on the opening day.

The vibration meter that will be given away at Maintenance Brussels will be the HS-620 Series Vibration Meter Kit, which provides all of the key tools required for monitoring velocity and bearing condition in a robust and portable case. The kit comes complete with a mains or in-car charger and rechargeable battery.

Among the equipment on show at Maintenance Brussels will be a re-engineered and enhanced version of the Hansford Sensors [spot facing tool](#). The new design of spot facing tool incorporates a high-wear tungsten tip, which extends operating life still further, while enhancing the precision with which each sensor can be fitted. There's also a [new series of environmentally sealed, quick release IP68 connectors](#) to add to Hansford's already extensive range.

Visitors to Maintenance Brussels will find Hansford Sensors on Stand E013.

About Hansford Sensors: the International Centre of Excellence for Vibration Monitoring

Hansford Sensors Ltd specialise in the design and manufacture of accelerometers for monitoring vibration and temperature levels of industrial machinery, playing a key part in the role of predictive maintenance. Products include intrinsically safe models for approved use in Group I (Mining) and Group II (Petrochemical). Hansford Sensors Ltd also supply multi-sensor switch boxes, vibration sensor modules, portable vibration meters, accessories for
