Rejlers - a key supplier in Vattenfall's investment projects

Rejlers Sverige AB and Vattenfall Distribution have signed a new framework agreement which will apply for two years from 1 January 2019, with the possibility of extension by up to five years.

Vattenfall is one of Sweden's largest electricity distribution grid owners, with almost 900,000 customers. Over the next five years, Vattenfall will invest about SEK 20 billion in its grid. Rejlers will be a key supplier of technical consultancy services in Vattenfall's investment projects over the coming years, which will enable the planned distribution grid to be expanded and renewed.

"Vattenfall is an important customer for us and we are already working closely together on many projects. Rejlers will continue to help Vattenfall overcome the challenges they face in our digitalised future. We are very pleased that Vattenfall has given us this renewed vote of confidence and look forward to working together under another framework agreement," says Jonas Böös, Customer Manager for Vattenfall at Rejlers.

Digitalisation of the electricity grid is a prerequisite for a sustainable society. In this field, Rejlers can contribute advanced digital solutions to streamline and adapt the grid to take account of security-related needs. Rejlers is a leading supplier to the energy industry within augmented reality (AR) and concepts such as "digital twins".
