Falkenberg Energi selects Quant Flow as its integration platform

Falkenberg Energi has signed a new agreement pertaining to the Rejlers integration platform, Quant Flow. The agreement means that Falkenberg Energi can continue to streamline data flows and integration between its different systems. The solution will also assist with meter changes in the future, as well as in connecting to the forthcoming Electricity Market Data Hub.

“We are pleased that Falkenberg Energi has chosen to expand its cooperation with Rejlers. We are looking forward to taking overall responsibility and being part of the creation of even more efficient data management,” says Thomas Pettersen, CEO of Rejlers Embriq in Norway.

“This solution gives us the opportunity to work in a more proactive way, in order to benefit our customers,” says Karin Tångning, head of electrical networks at Falkenberg Energi.

About the agreement

In the new agreement, Quant is offered as a SaaS (Software as a Service) solution to Falkenberg Energi, which means that all software is operated by and in Rejlers own operating environment or in an Amazon (AWS) cloud solution. Falkenberg Energi will also gain access to Quant applications (net user interface and integration), the IT production environment for Quant application operations, support of the IT platform and support and maintenance of Quant software. Falkenberg Energi will also have access to customer services, with a web-based case management system.

Quant – the Rejlers product portfolio for Smart Grid

Rejlers has been building up experience from central AMR and Smart Grid projects in the Nordic region for a number of years. The development of software solutions has been progressing in collaboration with a number of Norwegian and Swedish power grid companies and has been adapted for modern measurement data management and for the operation and management of smart meters. The main advantages a power grid company gets with Quant are a modern solution with a focus on efficient data management, reduced operating costs with automated and efficient processes, increased benefits with smart grid data, state-of-the-art security, the automation of the measurement value chain and last but not least, secure management of the electricity hub.

About Falkenberg Energi AB: Falkenberg Energi AB is a municipally-owned company with some of the best environmental credentials of Swedish energy companies. Together, we are working based on the vision “Energy for a sustainable future”. Falkenberg Energi was the first in the country to only sell electricity classed as a Good Environmental Choice to all its customers, as early as 2004. Its district heating is 100% fossil-free and its vehicle fleet 100% fossil-independent. The company is 99.6% renewable according to its latest climate survey. Falkenberg Energi distributes 360 GWh of electricity to 15,000 customers in the Falkenberg municipality and has a turnover of around SEK 210 million.

About Rejlers: Rejlers Embriq AS and Rejlers Embriq AB are part of Rejlers’ Norwegian operations, together with Rejlers Engineering AS and Rejlers Elsikkerhet AS. Rejlers is one of the leading engineering consultancy firms in the Nordic region. With our vision “Home of the learning minds” as a beacon, we create a platform for continuous learning, development and growth. Increased learning that creates added value for both customers and employees. We have nearly 2000 dedicated experts with cutting-edge expertise in technology areas such as energy, industry, infrastructure, real estate and telecom. We are close to our customers and are represented in a total of 70 locations in Sweden, Norway and Finland. In 2018, the company had a turnover of 2.4 billion SEK and its class B share is listed on Nasdaq Stockholm.
