Sinfra and Rejlers renew agreement concerning metering services for electricity market operators

Rejlers Embriq AB and Sinfra, a national central purchasing body working with sustainable procurement, have renewed their agreement concerning a general meter reading processing system. Through the new agreement, Sinfra's members are offered a flexible platform for managing meter readings and a collection system for meter readings from electricity, district heating and gas meters.

"We look forward to continuing our partnership with Rejlers, which has been one of our metering services suppliers during the most recent contract period," said Lars-Eric Larsson, Strategic Buyer at Sinfra.

"Sinfra is a key partner for Rejlers, as we have many shared customers in the electricity market, and the agreement makes it easier for member companies to place call-off orders for related services and products without having to go through time-consuming procurement processes. We look forward to supporting Sinfra with our know-how and expertise and continuing to guide companies in the right direction," said Martin Sellman, Country Manager at Rejlers Embriq AB.

Quant - Future-proof and flexible

Through the new agreement, Sinfra's members gain access to Quant, a flexible meter reading platform which is both future-proof and handles changes in the electricity market in a smart and agile way. For example, Quant is already integrated with Elhub in Norway and Rejlers is monitoring the development of Elhub in Sweden. Quant's collection engine handles most meter types on the Swedish market and can be integrated into various MDM/KIS systems. The connections are established via Drivers or API.

Quant is one of the market's most effective systems as regards development and adaptation to Smart Grid functionality. In Norway, Rejlers is the market leader with the solution and over fifty percent of all meter readings from Norway's electricity grid companies are processed via Quant. Through the new agreement, Sinfra's members are offered a platform for the flexible management of meter readings from electricity, district heating and gas meters.

About the agreement

The framework agreement covers the provision of general meter reading management systems and related products and services. The framework agreement is valid for two years, with the option of extension for one + one year.

About Sinfra

Sinfra is an economic association which is owned by its members. The main object of the organisation is to manage the procurement of products and services for the utilities sector. Sinfra's procurements make life easier for its members. Member do not need to carry out their own procurements, and they can quickly and simply place call-off orders under existing framework agreements. Sinfra currently has 222 member companies in the utilities sector in Sweden. Sinfra acts as an agent for its procuring entities, i.e. member companies throughout Sweden. For more information on Sinfra, see www.sinfra.se
