Rejlers invests in energy management consulting

The Swedish energy market is facing major changes. The opportunities and challenges of the future place increasing demands on today's energy companies in terms of their strategic choices and capacity for change. The need for management expertise is increasing, and Rejlers is now expanding its service portfolio to include Management Consulting aimed at the energy industry. The focus is on helping energy companies to make important strategic decisions associated with the conditions of the energy landscape of the future.

Thanks to its many years of collaboration with the majority of Swedish energy companies, Rejlers has assumed a strong position in the Swedish energy market, primarily through its technical consulting services in the electricity network market. There is an ever-increasing demand for management expertise, which is why Rejlers is now launching a consultancy business manned by industry experts who have many years of experience in developing and implementing business strategies.

“As the market changes, new customer behaviours are emerging that will challenge prevailing roles and the interdependence of energy producers, network owners and consumers. Based on the customer's specific needs, we help to implement the necessary developments and changes, with the aim of creating increased efficiency, identifying new market roles and business opportunities, and ensuring good profitability,” says Claes Böös, Business Area Manager Energy at Rejlers Sweden.
