Rejlers wins a commission from Borgholm Energi

Borgholm Energi has chosen Rejlers as a partner for the modernisation of the company's monitoring system. Rejlers will act as system integrator and be responsible for the introduction of a new Citect SCADA system for automated monitoring and control. The project will be implemented as a collaboration between Borgholm Energi and Rejlers. The commission includes the replacement of the systems for a total of eight production units (half wastewater treatment plants and half waterworks).

“Moving forward, the modernisation of our monitoring systems is an important project. We appreciate Rejlers’ knowledge and expertise in the field, and are confident that we’re in good hands,” says Tina Pile, Head of Water Production and District Heating at Borgholm Energi.

Rejlers is responsible for project management and systemisation, programming and commissioning. The project will be launched immediately and is expected to last for three years.

“We’re pleased that Borgholm Energi has entrusted us with this commission, and look forward to getting started and supporting the development of the company in the coming years,” says Nils Börjesson, Business Area Manager for Industry at Rejlers.
