Rejlers gets renewed confidence from Elvia

The network company Elvia in Norway renews the framework agreement with Rejlers on the control of capacitor batteries at all their substations in Oslo and Viken. Rejlers has long cooperated with Elvia in this area and the new framework agreement runs for two years with the possibility of an extension for another two years.

"We appreciate Rejlers cutting-edge expertise and have positive experience of their services from previous projects regarding capacitor batteries," says Ingvild Spurkeland, network planner and project manager at Elvia.

The capacitor batteries ensure a stable power supply to both private households and commercial buildings, and maintenance work is an important part of the operation. The inspection work will be carried out in the summer, when there is the least load on the power grid and repairs can be carried out without major disruption.
