## Rejlers wins assignment as Kumbro Stadsnät increases operational reliability

**Rejlers has won the assignment to help Kumbro Stadsnät AB increase operational reliability in their business. Rejlers expertise contributes with situation analysis and in the work to develop the correct data for operational reliability work. The assignment is expected to last until the end of the year with the possibility of further assignments.**

The digitisation of critical functions in society is accelerating. The demands from both authorities and customers have increased and the Swedish Post and Telecom Authority (PTS) sharpened its regulations already in 2016. The purpose of the stricter requirements is to ensure that operational reliability work can be carried out in the long term, continuously and systematically so that the local fiber networks meet the reliability requirements. Rejlers supports Kumbro Stadsnät in developing accurate documentation for operational reliability work, such as risk and vulnerability analysis, controls, documentation, division of responsibilities, action plans and continuity plans. The work covers both normal operating conditions and extraordinary events. The assignment may be extended with ongoing inspections of the local fibre networks.

"Rejlers has a solid knowledge of the local fibre networks and what is required to increase operational reliability in particular, but also safety work in a broader perspective, which induces confidence", says Niklas Stefansson, acting Head of Operations at Kumbro Stadsnät AB.

"We are pleased with the renewed confidence from Kumbro and look forward to working together on the project and helping to future-proof their business," says Niklas Siljeblad, Head of Division Communication & Security at Rejlers.
