## Rejlers wins design assignment for new innovative Nobel Center

**The Nobel Center Foundation has chosen Rejlers as electrical consultant for the new Nobel Center at Slussen in Stockholm.**

In 2031, the new Nobel Center is scheduled for completion. It will be a meeting place for science, culture and dialogue. It creates spaces for exhibitions, scientific conferences, a restaurant and café as well as premises for school activities.

As a designer and advisor on the building's electrical and telecommunications systems, Rejlers will play an important role in ensuring that the choice of technical solutions, installations and systems results in as low energy utilisation as possible. The assignment will be carried out in close collaboration with clients, other disciplines and the distinguished architectural firm David Chipperfield Architects.

"We look forward to contributing with knowledge and innovative solutions. Through the collaboration with the Nobel Center Foundation and other participants in the project, we will be able to create a fantastic building, with a design at the highest international level and with the least possible climate impact," says Rejlers Project Manager, Anders Käck.

Rejlers recently began the first phase of the project with a design concept that includes a feasibility study, operational programme and sustainability concept. The client's ambition is that Rejlers' assignment in the next step will also include the development of programme, project planning and construction documents.
