## Future-proof infrastructure – Rejlers to lead power grid works for Vantaa's new light rail

**Vantaan Energia Sähköverkot Oy has selected Rejlers as its construction management partner for a multi-year project linked to the new light rail system in Vantaa, Finland. The project involves significant renewal and relocation of the power grid along the planned tram route.**

Rejlers is responsible for construction management, safety coordination and site supervision for both civil and grid construction works. The project's complexity lies in its dense urban setting and the close collaboration required with multiple stakeholders.

"We are pleased to extend our cooperation with Rejlers. The light rail project is a major undertaking for Vantaan Energia, in addition to our ongoing network development. That makes it essential to have strong partners supporting us. Rejlers' expertise was evident from the very beginning, and we move into the construction phase with confidence," says Jussi Välimäki, Construction Manager at Vantaan Energia Sähköverkot.

"Managing construction in a compact city setting requires close cooperation, open communication and a shared vision. That's how we ensure a safe and sustainable project delivery," says Hannu Hiltunen, Business Unit Manager for Power Grids at Rejlers Finland.

The Vantaa Light Rail will form part of the Helsinki metropolitan public transport network, running from Mellunmäki via Tikkurila to Helsinki Airport. Construction is scheduled to begin in 2025, with operations expected to commence in 2029.
