Press release 20 November 2026

Rejlers brings broad technical expertise to new correctional facility in Trelleborg

Rejlers has been entrusted with continued design work for the new correctional facility in Trelleborg. The assignment covers electrical and telecommunications systems, structural engineering and design management. Drawing on its experience from earlier project stages, Rejlers brings both specialist expertise and a thorough understanding of the facility's requirements as the project now moves into the detailed design phase.

Rejlers is working on behalf of NCC, which is delivering the project under a design and build contract in collaboration with Specialfastigheter. The continued assignment covers assignment management and design within electrical and telecommunications systems, as well as structural engineering. Through design management, Rejlers also helps lead and coordinate work across the various engineering disciplines. The focus is on developing effective technical solutions that meet the facility's stringent security and operational requirements.

During the brief development and scheme design stages, Rejlers served as lead consultant, with overall responsibility for ventilation, heating and plumbing, electrical and telecommunications systems, structural engineering, acoustics, moisture control, sprinklers, lifts, design management and ground source energy.

"Our involvement in the earlier stages of the project has given us a clear understanding of the operational requirements and the technical decisions made along the way. This provides a solid foundation for taking the design forward together with NCC and Specialfastigheter, and for managing the interfaces between the facility's various engineering disciplines", says Daniel Bergqvist, Business Area Manager at Rejlers.

With a total floor area of approximately 110,000 square metres, the project is one of Specialfastigheter's largest investments. The facility will include a remand centre, several prison buildings, premises for the Swedish Prison and Probation Service's National Transport Unit, and a transfer centre. It is planned to accommodate more than 800 inmates and approximately 600 employees. Upon completion, it will be designated as security class 2 with enhanced security capabilities.

Sweden faces a significant shortage of prison and remand places. There are currently 13,000 places, and the Swedish Prison and Probation Service plans to increase this number to 20,000 by 2035.
