Nexam Chemical launches new website

Nexam Chemical has today launched its new website

www.nexamchemical.com.

The new website has been developed with the customer in focus, to give our current and potential partners an easy way to find information about our business and products. We continue to inform our shareholders and investors on a dedicated and easily navigated part of the website. The website is now also adapted for mobile and reading tablets. Since the company acts on an international market, the customer- and market-related part of the website is in English, while information for shareholders and investors are both in Swedish and English.

The website has now been launched but, since we are moving the new website to a different hosting service, it will still take some hours before everyone can access the website.

Note: This news has been translated from Swedish. The Swedish text shall govern for all purposes and prevail in case of any discrepancy with the English version.

About Nexam Chemical

Nexam Chemical develops technology and products that make it possible to significantly improve the production process and properties of most types of plastics in a cost-effective manner and with retained production technology. The improved properties include strength, toughness, temperature and chemical resistance as well as service life. The improvements in properties that can be achieved by using Nexam Chemical's technology make it possible to replace metals and other heavier or more expensive materials with plastics in a number of applications. In applications where plastic is already used, Nexam Chemicals products can improve the manufacturing process, reducing material use and enable more environmental friendly alternatives. Example of commercial applications: pipe manufacturing, foam production and high-performance plastics. More information about the business will be found on www.nexamchemical.com. The company's Certified Adviser is FNCA Sweden AB.
